Professor Joshua Lederberg
The Rockefeller University
New York, N Y 10021-6399

Dear Dr. Rosqvist - I would be grateful to you for reprints of your further work on genetics of virulence in Yersinia.

Do you know of any study of the "bubonic → pneumonic" transition? Anecdotally, the portal of infection suffices to control this; but I have long suspected a mutation. Is there any evidence, one way or the other?

Sincerely,

Joshua Lederberg
