FEB 2 6 1973

Josh —

These names were gleaned from a variety of sources. In some sense they are all potential users of the resource.

To avoid rushing into agreements with people we do not know, we will limit our telephoning to the people you and Ed already consider worth contacting.

Do you know Gorry, Beaumont, Sogemann, or Frey by chance?

Several mass spectroscopists might be able to use the resource, even though they are not doing AI work themselves. McLafferty, for instance, has expressed a desire to

use our estrogen data with his pattern recognition programs. Also, Burlingame, Biemann, Morrison, Cook, Budde, and Seahan might be interested. Tom R. believes we should not call them now, but should keep them in mind for later inclusion. Do you agree?

Bruce
