Dear Josh,

That was a very pleasant surprise to talk to you on the phone!

I am sending you my note book including the experiments in search for new linkage groups with high melting temperatures (ex. 108, 109, 110, 111, 112, 113, 114 and 120) and some others - perhaps you have some use too.

Now I am somewhat more settled in this new academic surroundings, I am enjoying my teaching very much.

In 1963 I remember a hand book on transformation was being put together at the Lab. Do you think I may have a copy of that?

With best regards to you & Esther,

Mei Fradkin

P.S. Please let me have the notebook back when you are through.
