Periodic selection

Atwood's paper is in the 1951 Cold Spring Harbor Symposium. The subject is updated in Microb Rev 47: 1983 156. by Dykhuizen. But this will model only the random sampling of a segment to become a "master".

The more general case is just drift to extinction, as you know, of a rare allele. – cf. e.g. Cavalli Sforza + Bodmer, Genetics of Human Pop'ns pg 412 ff. – probably familiar to you

THE ROCKEFELLER

meiotic protein(s)

These are what I had in mind.

I am rechecking my files in re yeast analogues that Mortimer or Fogel may have told me about. (??)

Thank you for a very interesting discussion.

[illegible]

you will see prototrophic [illegible]
