Benzer - Fine Structure

(to a comment some weeks ago.)

Yes - topology is King!

However, Benzer did put some stress in his early work on finding the quantum of recombination ~ adjacent nucleotides. Then it got complicated!

Formally, "negative interference" - nonlinearity is another matter, though just as you say it speaks to mechanisms besides "crossing over".

Benzer "1957"
Stent pg 364-366
P98 (cont)

PS. The first computer programs I wrote (to learn "ALGOL") were to order deletion mag. proj: I think this was before Benzer was doing this on the computer.
