Understanding and Promoting Physical Activity

# LIST OF TABLES AND FIGURES

## Chapter 2: Historical Background, Terminology, Evolution of Recommendations, and Measurement

| Table 2-1. | Glossary of terms |
| Table 2-2. | Selected physical activity recommendations in the United States (1965–1996) |
| Table 2-3. | Assessment procedures and their potential use in epidemiologic research |
| Table 2-4. | Classification of physical activity intensity, based on physical activity lasting up to 60 minutes |
| Table 2-5. | Correlation of two survey instruments with physiologic measures of caloric exchange |

## Chapter 3: Physiologic Responses and Long-Term Adaptations to Exercise

| Table 3-1. | A summary of hormonal changes during an episode of exercise |
| Table 3-2. | A hypothetical example of alterations in selected physiological variables consequent to a 6-month endurance training program in a previously sedentary man compared with those of a typical elite endurance runner |
| Figure 3-1. | Changes in cardiac output (A), heart rate (B), and stroke volume (C) with increasing rates of work on the cycle ergometer |
| Figure 3-2. | Changes in arterial and mixed venous oxygen content with increasing rates of work on the cycle ergometer |
| Figure 3-3. | Changes in oxygen uptake and blood lactate concentrations with increasing rates of work on the cycle ergometer |
| Figure 3-4. | Changes in \( \text{VO}_2 \) max with increasing age from 6 to 18 years of age in boys and girls |
| Figure 3-5. | Changes in \( \text{VO}_2 \) max with aging, comparing an active population and sedentary population (the figure also illustrates the expected increase in \( \text{VO}_2 \) max when a previously sedentary person begins an exercise program) |

## Chapter 4: The Effects of Physical Activity on Health and Disease

| Table 4-1. | Population-based studies of association of physical activity or cardiorespiratory fitness with total cardiovascular diseases |
| Table 4-2. | Population-based studies of association of physical activity or cardiorespiratory fitness with coronary heart disease |
| Table 4-3. | Population-based studies of association of physical activity with stroke (CVA) |
| Table 4-4. | Population-based cohort studies of association of physical activity with hypertension |
A Report of the Surgeon General

Table 4-5. Epidemiologic studies of leisure-time or leisure-time plus occupational physical activity and colon cancer

Table 4-6. Epidemiologic studies of leisure-time or leisure-time plus occupational physical activity and hormone-dependent cancers in women

Table 4-7. Epidemiologic studies of leisure-time or total physical activity or cardiorespiratory fitness and prostate cancer

Table 4-8. Cohort studies of association of physical activity with non-insulin-dependent diabetes mellitus (NIDDM)

Table 4-9. Longitudinal population-based studies of physical activity as related to depressive symptoms

Table 4-10. Duration of various activities to expend 150 kilocalories for an average 70 kg adult

Chapter 5: Patterns and Trends in Physical Activity

Table 5-1. Sources of national and state-based data on physical activity

Table 5-2. Percentage of adults aged 18+ years reporting no participation in leisure-time physical activity, by various demographic characteristics, National Health Interview Survey (NHIS), Third National Health and Nutrition Examination Survey (NHANES III), and Behavioral Risk Factor Surveillance System (BRFSS), United States

Table 5-3. Percentage of adults aged 18+ years reporting participation in no activity; regular, sustained activity; and regular, vigorous activity, by state, Behavioral Risk Factor Surveillance System (BRFSS), 1994, United States

Table 5-4. Percentage of adults aged 18+ years reporting participation in regular, sustained physical activity (5+ times per week for 30+ minutes per occasion), by various demographic characteristics, National Health Interview Survey (NHIS) and Behavioral Risk Factor Surveillance System (BRFSS), United States

Table 5-5. Percentage of adults aged 18+ years participating in regular, vigorous physical activity (3+ times per week for 20+ minutes per occasion at 50+ percent of estimated age- and sex-specific maximum cardiorespiratory capacity) by various demographic characteristics, National Health Interview Survey (NHIS) and Behavioral Risk Factor Surveillance System (BRFSS), United States

Table 5-6. Percentage of adults aged 18+ years reporting participation in selected common physical activities in the prior 2 weeks, by sex and age, National Health Interview Survey (NHIS), United States, 1991

Table 5-7. Percentage of adults aged 18+ years reporting participation in any strengthening activities or stretching exercises in the prior 2 weeks, by various demographic characteristics, National Health Interview Survey (NHIS), United States, 1991
Table 5-8. Trends in the percentage of adults aged 18+ years reporting participation in no activity; regular, sustained activity; and regular, vigorous activity, by sex, National Health Interview Survey (NHIS) and Behavioral Risk Factor Surveillance System (BRFSS), from 1985–1994

Table 5-9. Percentage of young people reporting no participation in vigorous or moderate physical activity during any of the 7 days preceding the survey, by demographic group, 1992 National Health Interview Survey-Youth Risk Behavior Survey (NHIS-YRBS) and 1995 Youth Risk Behavior Survey (YRBS), United States

Table 5-10. Percentage of young people reporting participation in vigorous physical activity during 3 or more of the 7 days preceding the survey, by demographic group, 1992 National Health Interview Survey-Youth Risk Behavior Survey (NHIS-YRBS) and 1995 Youth Risk Behavior Survey (YRBS), United States

Table 5-11. Percentage of young people reporting participation in strengthening or toning activities during 3 or more of the 7 days preceding the survey, by demographic group, 1992 National Health Interview Survey-Youth Risk Behavior Survey (NHIS-YRBS) and 1995 Youth Risk Behavior Survey (YRBS), United States

Table 5-12. Percentage of young people reporting participation in stretching activities during 3 or more of the 7 days preceding the survey, by demographic group, 1992 National Health Interview Survey-Youth Risk Behavior Survey (NHIS-YRBS) and 1995 Youth Risk Behavior Survey (YRBS), United States

Table 5-13. Percentage of young people reporting participation in walking or bicycling for 30 minutes or more during 5 or more of the 7 days preceding the survey, by demographic group, 1992 National Health Interview Survey-Youth Risk Behavior Survey (NHIS-YRBS) and 1995 Youth Risk Behavior Survey (YRBS), United States

Table 5-14. Percentage of young people reporting participation in selected physical activities during 1 or more of the 7 days preceding the survey, by demographic group, 1992 National Health Interview Survey-Youth Risk Behavior Survey (NHIS-YRBS), United States

Table 5-15. Percentage of students in grades 9–12 reporting enrollment in physical education class, daily attendance in physical education class, and participation in exercise or sports for at least 20 minutes during an average physical education class, by demographic group, 1995 Youth Risk Behavior Survey (YRBS), United States

Table 5-16. Percentage of students in grades 9–12 reporting participation on at least one sport team run by a school or by other organizations during the year preceding the survey, by demographic group, 1995 Youth Risk Behavior Survey (YRBS), United States

Figure 5-1. Percentage of adults aged 18+ years reporting no participation in leisure-time physical activity by sex and age

Figure 5-2. Percentage of adults aged 18+ years reporting no participation in leisure-time physical activity by month

Figure 5-3. Trends in leisure-time physical activity of adults aged 18+ years, NHIS

Figure 5-4. Trends in the percentage of adults aged 18+ years participating in no leisure-time activity, BRFSS

263
Chapter 6: Understanding and Promoting Physical Activity

Table 6-1. Summary of theories and models used in physical activity research
Table 6-2. Studies of interventions to increase physical activity among adults
Table 6-3. Summary of progress toward Healthy People 2000 objective 1.10
Table 6-4. Percentage of all physical education courses in which more than one class period was devoted to each activity, by activity, School Health Policies and Programs Study, 1994
Table 6-5. Studies of interventions to increase physical activity among children and adolescents
Figure 6-1. Results of the Minnesota Heart Health Program on physical activity. Graph compares the percentage of respondents reporting regular physical activity in intervention cities and the secular trend estimated from control cities
Figure 6-2. Moderate-to-vigorous and vigorous physical activity observed during Child and Adolescent Trial for Cardiovascular Health (CATCH) physical education classes
