January 19, 1950

Dr. Joshua Lederberg
Department of Genetics
University of Wisconsin
Madison, Wisconsin

Dear Dr. Lederberg:

If available, I would appreciate reprints of the following papers:

- Genetics, 32:505-25, 1947
- Heredity, 2:145-98, 1948

In your review in the Annual Review of Microbiology I hope it is the printer on page 18 who is responsible for the conversion of a non-motile Bacillus mesentericus to a motile Bacillus anthracis and not some unlucky bacteriologist. For years we have taught that typical anthrax is a non-motile organism.

Sincerely yours,

[Signature]

Carl Lamanna, Ph. D.
