Dear Josh:

Thank you for the cultures. However, what I need are pyrimidineless, not purineless. There were two in the group I can work with, and I'll pass them on to Gots.

May I have a reprint of your *Physiol. Rev.* article when you get it?

We're having a lot of fun with pyrimidines, and feel we are on the verge of interesting discoveries, having observed some very peculiar things already.

With best regards, I remain

Sincerely yours,

*Seymour*
