Dear Josh,

I shall give you more details concerning my travel plans. I hope that I shall be able to spend the morning of April 11 with you and Esther in the laboratory.

I have had the greatest difficulties in getting any enzyme activities in lysates of 'Gal 9'. I am trying again and also running '3265, Gal 3'. When I join Hopkins we will get much more steam on that program. At present I am doing it alone and mainly in the evenings.

Hope to have some results. I had a letter from Gopal; he will be here the 24th.

Looking forward to seeing both of you.

Sincerely,

Herman M. Kalckar

HMK:lh

P.S. If you can spare a copy of your "Letter" concerning contamination on the moon, I would appreciate it. It is Columbus egg applied to the moon, an uncontaminated egg.
