Lüder Temmen

Dear Professor,

Please allow me as student of medicine to ask you a question.

For quite some time I have been thinking intensely about the Jacob-Monod-Model. But I have not been able to find an answer to the question how, which means with which chemical linkage the regulatory protein is linked to the DNA.

May I ask you, dear Professor, whom I consider the most able geneticist of our time, to answer this question?

You would help me with this in my studies to take a considerable step forward.

Sincerely,
