Personal memo from
JOSHUA LEDERBERG

Robert Kohler
U-Pa.

MAY 18 1994

Dear Robert:

I've now enjoyed reading your book.
It is a near-shoot, a dream to possess
and which I find absorbing.
It was, by your stated design, less focused
than I might have preferred in the
"vitiating scientific tissue." But it is
"imaginative" with the Lord. P.S. The fly
is still kicking. I'm not succeeding in getting "stamina"

I do hope you I mention me
detail about Neurospora, page 239.

1. Robert's worked on the nutritional
requirements of biotin for Neurospora
(keeping in mind Calvin's postdoctoral
year at Utrecht on fungal nutrition,
generally)

Science 94: 267 (1941)

2. Not scraped off again!!! Broom in
liquid culture!! Attend, and the
mycelia dried and weighed. See
endnote.

9/1.
