Professor Hans Knoll  
Institut for Mikrobiologie Und Experimentelle Therapie  
Deutsche Akademie Der Wissenschaften Zu Berlin  
Jena, Germany

Dear Professor Knoll:

My friend and colleague, Dr. Vernon Bryson, has mentioned his interest in a possible research visit to his laboratory at Rutgers University on the part of Dr. Udo Taubeneck. I have been impressed with the ingenuity of Dr. Taubeneck's previous work on morphology and lysogeny of Proteus. As he is now interested in transformation of biochemical markers in these bacteria, it would be of great advantage to his further scientific work to become acquainted with recent developments in such research, for which the Rutgers laboratories are a renowned center.

Cordially,

Joshua Lederberg,  
Professor of Genetics
