Mechanisms of sonic lysis

Dear Boris,

It puzzles me that after 30 years this has still not, as far as I know, been cleared up.

Did you even check the role of Myt+ (cf. stabilization of penicillin-esterase) of J. Bact. 75: 193 (1950)?

Will T6P protect viability of sonicated cells?

If sonicated cells can be lytically
they might still be very useful for
complementation of bioassays.

John
