Diary of Michael E. DeBaby
Aug. 1
I begin this with my departure from Lake Charles, La., for better or for worse, depending, of course, upon whose eyes may unguardedly see it. My train journey to Chicago was somewhat lengthy but comfortable and not unpleasant (possibly because I met no one to converse with). I arrived in that village I gathered fame in the evening of Aug. 10th, and registered at the select Blackstone hotel (as business is bad they are not so select thus accounting for my staying there). After a much needed bath and a hearty meal, I retired to bed early.

Aug. 11
Up early this morning after a refreshing sleep and took myself off to meet Mr. V. Muller. He proved to be a charming gentleman of the old school but reared in Germany and even now smacking of their “Kultur” and strength of character. He is a successful business man, broadly traveled, full of enthusiasm.
and required my experience. He enthralled me for a full hour with a glowing description of his recent experiences while traveling in Germany, the Balkans, and India. I demonstrated the plans of my new transfusion instrument which he received with warm enthusiasm. I departed that night for New York and after a most benevolent journey arrived there the following evening, Sunday, 8/12/35. (Uneventful except for one thing. I had called Dean de Chicago the night of my arrival and all the next day anxiously awaited a reply which never arrived. However, the following day, Sunday, about noon, on route in the dining car I received the answer. It was a happy communication.)

Aug. 13.

I stopped at the Montclair Hotel which appeared clean and hospitable. This morning I was met by Mr. Oscar Schwietzky, mjr. of the Research dept.
of Becton, Dickinson & Co. and his wife drove us to their plant. There I met Mr. Lawshe, who proceeded to take me on a tour of inspection of their factory. It was most educational and enjoyable, and I’m thoroughly convinced that every modern would-be-disciple of Descartes should have this advantage. It would be in a much better position to appreciate the value of the instrument he must daily use. I also saw the actual manufacture of my own transfusion needle and finished with pardonable (or is it unpardonable) pride. I had lunch with Mr. Lawshe and Mr. Becton at their charming country club. In the afternoon I again met Mr. Schwindtserky and he drove me to his home where we had a glass of cognac and later he drove me to the city.

Aug. 14 I went out to Brooklyn to see Dr. Wadlow who was courteous but not very congenial. He is a general...
practitioner of the older type and I don't think a particularly good one. After paying my respects I gladly departed. After returning to the hotel I procured a book and read myself to sleep.

Aug. 14. This morning I made the acquaintance of Mr. Jabara who was not only courteous but hospitable as well. I had lunch with him at a Syrian Restaurant and enjoyed it immensely. He was personable, interesting and even desired to give me fatherly advice (for which I am always a gracious listener). On the way to the hotel I stopped in a small bookshop thinking to purchase "Woolcot's While Rome Burns" and met a most genial Mr. Tortenfory (another German - are all the nice people Germans?). We immediately struck up an engaging conversation and then went out to dinner. It was for some time in the theatrical business and toured all Europe with the larger Midgets (he was their business manager). He has a nice collection of books, mostly his own and I
Aug. 15
Up early and saw Frank Hcca who was one of my classmates at Tulane. He is practicing law in New York and I surmised from his attitude that he would prefer living in the South. I certainly don't blame him. I can't say that my sojourn in New York has been particularly enjoyable. I simply do not like this immense city with its towering skyscrapers and cold foreboding edifices. I am actually vehement in my dislike and disapproval (although I realize it is unmotivated). People here cannot really enjoy life—there is an art that has escaped them. Life passes them by with not even a "bon jour". However, with all due fairness, I must say that I did meet a few nice people (and so help me, they were nearly all Germans). I made the final arrangements with the Chase National Bank to transfer my
account to the Paris Branch and in the evening went to the cinema.

Aug. 16  Up early and made arrangements to check out of the Hotel as my boat sails tonight. Met Mr. Sorensen this afternoon and he and his brother took me out to witness an excellent baseball game at the Polo Grounds. The St. Louis Cardinals demonstrated their prowess as well as their dizzy pitcher Dean over the N.Y. Giants with the overwhelming score of 7 to 0. We had a Russian dinner that night and he saw me off at the pier as the Champlain departed amidst shrills of lion voyage, fronting waving and bellow and there a parting tear.

This parting scene aroused in me conflicting emotions of sad departure and anticipative glee and I stood at the deck rail until long after everyone had retired profoundly contemplating what the future held in store. However I finally roused myself
from this deep, migratory reverie and
resolved to seek my berth "to repair
my nature in comforting repose."

Aug. 17.

Saturday

I was awakened this morning
by the swishing of the briny sea. The
invigorating fresh salt air was stimulating
and I began my toilette with a feeling
of hey, mony, mony — The cabin steward
brought me a telegram from the folks
at home wishing me "bon voyage" and
an epistolary expression of the same thing
from that excellent secretary, Miss Foreby.
[Here would come like that.]

At breakfast I ordered in my best
French; all the while humorously thinking
of the advertisements of the man who was
laughed at when he first sat down at
the piano to play. Nevertheless, I enjoyed
a hearty "petit déjeuner."

I note that there are a large number
of passengers who are obviously French
and travelling in groups. So far I've
made no one acquaintance and have
Aug. 18

Up early and after a hearty breakfast completed reading "While Rome Burns." Was indeed sorry to have to lay the book aside. There is one story in the book that is absolutely incredible i.e. "The Vanishing Lady," and yet it is related in a true-story fashion. There is no doubt about Woolcott's ability to write.

Had a nap in the afternoon and later engaged in a game called "Tinoo" in which Lady Luck frowned upon me causing my fortune to diminish by 70%. After dinner tonight I witnessed a movie entitled "Purnell," in which Chester Morris and Sally Eilers overcome every obstacle in taking a child to its mother in Mexico and ended in an happy embrace. In the evening there was dancing in the bawmoom but I did not enter into this diversion.
Aug. 19. Upon awakening this morning I noted
that there was a decided rocking of the
boat. After peering thru the porthole
I could see that the sea was choppy
and a bit rough. Wonder if seacickness
would overtake me. It certainly did not
diminish my appetite.
I have been very fortunate in having
an entire cabin to myself. It is not
that I do not desire company but in
obtaining a cabin like this one has no
choice of his berthmates so it is better
not to have to take a chance. The other
berth in my cabin has not been taken
and as a result I have it all to myself.
This afternoon we ran into a dense fog
and the regular groaning of the foghorn
added to the dismal atmosphere. Not many
passengers out today and I understand
there are a large number sick. In
my opinion the greater part of seacickness
is mental.

Another cinema, "The Girl Friend," was
shown tonight. It was good for a third
Tuesday

Aug. 20

class movie. After dinner there was a
dance but I left that with little remorse
for the arms of Morphine in my lonely
birth.

Today we are half way across in
the middle of the Atlantic. On deck one
looks in all directions and see nothing but
water. It makes one feel infinitesimal only
nature can do that.

The food has been delicious. My master
tries his best to enrage me. He does not
seem to understand how I can live on what
I eat and yet to me it is immense. (Point
of view - I've always maintained)

As a result of the inquiring mind I found
myself before the information desk determining
the cost of a radio when I was told that
it was 10 francs (42c) a word and one
page also for the name and address. I
made a graceful exit stating that on
second thought it would probably be
better to deliver my message in person.

It has become somewhat rougher today
and a number of passengers have found their way hurriedly to the rail. So far I've been a good sailor.

There was another cinema this afternoon but I missed it because I found myself suddenly engaged in conversation with one of the band members. This is not his profession and like the others it is simply a means towards a vacation. They are all Americans. He is an engineer graduating from Temple and now associated with a firm in New York. His name is and seems to be a very agreeable person.

It is even rougher this morning and the chairs in the dining room and lounge have been bolted down. The boat dips from side to side and up and down. A number of passengers are seasick. There is a drizzling rain outside and a heavy, gloomy, foggy atmosphere. I met a Dr. Sauve from Boston today. He is en route to
Switzerland to spend a few months with his family. We had the Commandant's dinner without the Commander and I am afraid his gastronomic tastes do not appeal to me. Another Cinema was shown tonight entitled "Page Miss Glory" but the rest was not very good. It's getting rougher as we progress and now there's no deck strolling but best to put it to bed.

Aug 22

Up this morning rather late and breakfasted about 10 o'clock. Learned the boat arrives in Phase about 9:30 tomorrow night and there will be a streamlined train leaving for Paris about an hour later. This was good news as it appeared for a while as though it would be necessary to remain in Nave Friday night. The boys playing in the band are all young Americans that are playing their way over and back again. All have other occupations and this is just a hobby; they seem to be very
Aug 23. We arrived in Plymouth today at 10 o'clock P.M., and I was amongst the first to set foot on land. Imagine my unbounded joy when the first person I set eyes on was lovely Diana, as prim and neat as ever and beaming with a beautiful smile of welcome. A happy reunion. She had come up from Paris to meet me and I was gratefully appreciative. We had no trouble getting thru the customs as their search and inquiry centered about cigarettes. We then took the special train to Paris at 10:35. The tickets were 250 francs first class and 130 francs second class so I naturally took the latter. There is not that difference in the riding comfort. I checked in at the Hotel Royal Villiers at
1 o'clock Saturday morning Aug. 24.

I find everything in Paris very expensive. This is in great measure due to the fact that the American dollar is only worth 59¢ and one gets only 15 francs for a dollar. As a result everything seems to cost almost twice the price at home. For instance cigarettes cost 6½ francs or about 40¢ (The popular American brands). Gasoline or as the French say Essence costs 3½ francs per liter or about 70¢ per gallon. Of course this is out of all proportion because most of it is imported. Automobiles here are also very expensive. The ford which is actually made here costs 28,000 francs or almost $2000. The cheap french cars range around $1000. This accounts for the large numbers of bicycles and motorcycles.
The first morning I was in Paris I had a rather humorous experience. I had just awakened and desired a bath. By the way, this seems to be quite a luxury in France. One always pays extra for a bath - usually about 5 francs. But of course, one pays extra for everything here. In fact I understand that the government is seriously considering imposing a tax on the very air foreigners breathe while sojourning in France. The bath here seems to be a luxury because the French don't bath often. Because of their extreme conservatism they bathe about once a week - that is the cleaner ones. It is supposedly bad for the health. And now about the funny story. I rang for my bath and the valet came to my room to inquire what I desired. He did not understand a word of English and it was necessary for me to
I speak French. So summoning up my best Sunday-go-to-meeting French I desired a bath and said the French word for bath which is "bain." He seemed to understand but immediately asked me with a gracious smile what color I desired: brown or black. Of course, I was somewhat perplexed. He rather had me there. But, I reasoned, I am in a strange country among strange customs and possibly the baths here are more suitable in those colors. I immediately regained my composure and responded that I would have the brown as black was not good for my disposition. Imagine my undisguised embarrassment when a few minutes later I opened the door to an inquiring knock to find a waiter there with a tray and a glass of beer. He had understood the word "biere" for my French rendering of "bain." I was far from complimented to my French pronunciation.
My sojourn in Paris was most enjoyable. I visited the Louvre and gazed my eyes on the beautiful old oil paintings, magnificent works of art, tapestries of unspeakable value, and the invaluable historical treasures of the Egyptian excavations. This visit as well as almost all of my tour of Paris was made with lovely Elena and it is for this reason that it was so enjoyable.

Met Dr. Salem who was with Kanasel for some time and after returning to France wrote a French textbook on surgical infections of the hand. Visited some of the French clinics with him but was not very favorably impressed with their methods.

Met Drs. Fuller and Boyce at the American Hospital. Both were very courteous and kind and explained that most of the men I wished to see were away.
on vacation. The American Hospital was impressive. The rooms are large, spacious, and airy with their own dressing room and supplies as well as bath.

The subways in Paris, referred to as the "Metro," are the best means of travel. There is a first and second class (as with almost everything) but one rarely rides anything but second class and it is possible to go anywhere in Paris for 70 cents.

Went to a Parisian night club, "The Caravane," a Russian place with Dr. Pechkov Anderson, Verda Henzig, and Dawn. We had one fancy apiece and it cost 245 francs. Such extravagance!

On Sept. 1, moved from Veille, Royal Villiers to Villa Beacon, a copy little pension in Neuilly—very nice.

On Sept. 6 went with Mr. Francis Joseph Leyna jr. of Newport R.D. to the Hotel Ritz for dinner—excellent meal with beautiful surroundings—very
rich place. Then to the Folies Bergère - a cheap burlesque.

On Sept. 7 had my Birthday dinner with dear Diana. Am 27 yrs. Fage today - how time passes.

Went to Notre Dame and we paid 2 francs to climb the old cicular stairway to the tower - very fatiguing. Took some pictures at the top.

On Sept. 10 at 12.30 I took the train for Strasbourg. Diana saw me off. I know how I will miss her.

The train journey was uneventful and at 7:30 P.M. we arrived safely. Checked in at the Hotel Marion Range.

On Sept. 11 - up early, breakfasted, and to the hospital where I met Prof. Tschirch who received me kindly. Also met Dr. Malkarziga of Columbia, South America. He had studied at Cornell and speaks English very well. He was very kind and directed me to the Pension Elisa. At the Pension met Dr. Cavetti and his
wife. Both are about my age. Hattie
from Milan - extremely nice. He is
a foreign assistant like myself at the
clinic.

A bit about Strasbourg.
In the extreme eastern part of
France lying between the rapidly
flowing Rhine river and the mountain
ranges in the land of Alsace. Here
is a country as unique, picturesque and
characteristic as the people that inhabit
it and the beauty of all its civilization
is typified by its most important
center, Strasbourg. This city, tout un
contraire to its turbulent history,
tranquilly reposes in a rich, fertile,
almost midway between the Vosges on
the distant west side and the Black
forest in the east and huge the Rhine
with almost jealous fervor. As a
result of this geographical situation,
at the borders of two rival civilizations
willingly or not it has always been
enriched by the acculturation of one
or the other of these two great nations with which it has been alternately united. And it is this very admixture of the best of the Teutonic and Celtic qualities that gives Alsace and its great center, Strasbourg, its characteristic and unique beauty.

Apparrelly predestined to the costly glories as well as the adversities and necessities of military order this city has faithfully and virtuously lived up to its traditional origin. It was on this very soil that Drusus, fifty hundred years B.C, established a fortified post in the name of the Roman people with the object of stemming the incalculable hostile raids of the savage and incursive Alains, Vandals, and Sarmatians who infested the land beyond the Rhine. For five centuries this fortified post which rapidly developed into a city was known as Argentoratum thus typifying its traditional commercial and industrial activity. Then for
for reasons more chimerical than authentic the name was changed to Strauburgan and thus Strauburg, the city of roads where two worlds meet on the banks of the Rhine, where the Roman road descended from the Vosges on the west to cross those which joined Italy to the North of Gaul and upon which, so legend states, journeyed the first Christian missionaries sent by St. Peter himself. And if we continue to read the history we find that from the earliest recorded dates to the recent World War this land has been the arena of many upheavals, violent quarrels and uprisings, bitter rivalry, and grim-uraged war and blank shed.

At present Strauburg boasts a population of almost 200,000 inhabitants consisting of the newly emigrated French and Germans and the native Alsatians who constitute the great majority. Both the French and the German or the nature native "Jatas" the Alsatian which must be
distinguished from the true German are spoken with equal facility. Thus in every phase of its civilization, in its art, music, architecture, and its culinary art there is this predominant adventure.

The city has a proud display of many interesting and historic sites and the most notable of all its symbols and most venerable of all its edifices is the Cathedral of Strasbourg. This impressive structure seemingly proud of its noble age and magnificent architectural splendor solemnly rises to an almost incredible height in apparent haughty disdain of its wholly but quaint surroundings. Although it was first begun by Bishop Wernher in 1015 credit for its present architectural design, its noble austerity of construction, and Gothic style and its high artistic purity of detail belongs to Erwin who built in the latter part of the 13th century. The final crowning
of its spire was completed in 1439 by Jean Huître. The beautiful and artistic stained glass windows which give its interior a characteristic charm by its soft illumination are unique in that they have been preserved almost intact since their installation between the 12th and the 15th centuries. In the interesting history of the Cathedral the famous clock made its first appearance in 1352 but the name of this artist is unknown although legend would have us believe that his eyes were removed so that it would be impossible to duplicate its mechanism. However, the present mechanism was calculated and created by the celebrated Strasbourg clockmaker, Schweiglin, from 1538 to 1642. It is a most intricate and ingenious example of mechanical workmanship and contains a perpetual calendar indicating all the festivals and automatically regulating itself for leap year. It also indicates the course of the planets, the eclipses of the moon and sun, as well
as the days and hours. The quarter hours are successively represented by a child, an adolescent, a man and an old man who pass before death striking upon a bell while Death rings the hours. However, the most interesting spectacle occurs at 12 o'clock midnight and noon. Immediately after Death has rung the 12th hour, the procession of the 12 apostles begins. Each apostle is blessed by Christ as they pass before him and this ceremony ends with the cock who claps his wings and crowes three times in a most lifelike manner.

There are many other beautiful and historically interesting sites. The splendid old imperial German palace remains yet an imposing monument boastfully commemorating Germany's previous control of Alsace. This imposing edifice confronting the Place de la Republique (which was formerly the Place Imperial) was constructed for William the first after Germany had regained Alsace in 1870.
and represents the great zeal and anxiety of the Germans in their desire to embellish this region land with their kultur. Bordering the square and immediately opposite the Imperial Palace are two other constructions excelling the gothic activity which the Germans displayed in their endorsement of style. The one on the right is the Conservatory Municipal which was formerly the Palace of the Parliament and is constructed in typical Renaissance style. The other building is the present Bibliothèque of the University and is the second largest library in France, containing 120,000 volumes and over 50,000 manuscripts. The University is probably the most important building which Strasbourg inherited from the German epoch. Constructed between 1879 and 1884 in typical Italian Neo-Renaissance style it now houses one of the most advanced centers of French education. Conspicuously before the University stands an arresting monument of Goethe as a student who
came to this university to seek knowledge
and a happy life.

The L'Orangerie, which in 1806 was
converted into a garden and endowed
with a building in Empire style was
presented to the Empress Josephine who
departed in Strasbourg during Napoleon’s
Campaigns in Germany. The beautiful
garden, tenderly cared for as though
in worshipful memory of that once
noble and dauntless resident contain a
most resplendent array of multi-colored
flowers, significantly and artistically
arranged.
Professor Karel Lepich's clinic

In the extreme eastern part of France tranquilly resting almost midway between the mountainous Vosges and the Black Forest and hugging the rapidly flowing Rhine with seemingly palaces yelow, is the city of Strasbourg. Apparently predestined to the castly gloire as well as the adversion and reinterth of military order this city has heritably flown up to its Traditional origin. On this very soil Drusus 1500 years before the Birth of Christ established a fortified post in the name of the Roman people with the object of stemming the menacing hostile raids of the savage and incureve Alains Vandals, and Armades who inhabited the land beyond the Rhine. But despite the fact that it has been the center of the arena in which grim-vexed war played many
in a leading role, it has progressively developed into one of the most active commercial, industrial, artistic and educational centers of Europe. Because of its unique geographical position, i.e., at the borders of two rival civilizations willingly or not, it has always been enriched by the acculturation of one or the other of these two great nations with which it has been alternately united. And it is this extraordinary but harmonious co mingling of the rich Teutonic and Celtic qualities that gives place and its great center, Strasbourg, its characteristic and unique beauty. Var, famed as the originator of Saumur wine, renowned for its inimitable stone, the place to raise, and celebrated for the magnificent beauty and slaty, keathic purity of its imposing cathedral, this great center has indeed a rightful and deserving place among the great cities of the world. But of all of the grand possessions, there is none it could display with...
more pardonable pride than its great University, for here modestly resides one of the world's most advanced centers of education, and no part of the University is more progressive or has a nobler inheritance than the Medical School. Constructed on the same grounds and as an integral part of the Hospice Civil, consisting of over fifty buildings, covering over 70 acres of ground, possessing its own electric power, water, and heating system, it is indeed a little city within itself, forming one of the world's largest medical centers.

As old as this hospital and so vague are the early records that its origin is lost in antiquity. However, it may be said with some degree of authenticity that it was founded about the year 657 A.D. probably but the Due d'Alamètte, or Ellinon, the father of Saint Adile, and was administered by the bishops.
until the year 1263. At this time the administration of the hospital was given to the city by the Bishop Henri de Béraldsack and fifty years later the hospital was transferred outside the city boundary to its present site. In 1716 it was almost completely destroyed by fire, only the chapel of Saint Edward escaping, which incidentally dates back to the fifteenth century, and remains yet a monumental confirmation of the admirable courage and unwavering determination of those early workers.

With its reconstruction came a new epoch in the advancement of the medical school which became better organized, more firmly established, and began its rapid strides of progress and development. The chairs of Pathology, anatomy, surgery, etc., were definitely assigned, and here was founded in 1734 the first school of midwifery in the world. From this time until 1840 it continued to rapidly advance and flourish under the enterprising
influence of the French School. During the German Epoch from 1870 to 1918, the great zeal and fervent activity that was displayed in enlarging and enhancing the hospital and university has resulted in making it one of the largest medical centers of the world today. To attempt a further detailed historical and descriptive discussion of the hospital and university would be inopportune as well as inexpedient. As our interest is admittedly confined, we may risk being misunderstood and limit it to one of the most conspicuous advanced and scientifically progressive departments, namely Clinique Chirurgicale A. It may be parenthetically stated that the surgical department consists of two divisions: Clinique Chirurgicale A and Clinique Chirurgicale B, but we are solely concerned with the former. The present edifice of Clinique Chirurgicale A was completed in 1881.
and contains 905 beds. Constructed in
simple style with large spacious
hallways and vast airy wards, it
possesses two operating pavilions, one
of which is provided with a huge
operating theatre, modernly equipped laboratories
of surgical pathology and experimental
surgery; its own department of radiology;
an out-patient clinic; an ophthalmic
department; and a separate building
devoted to septic cases.

However, our interest in this
clinic is aroused, not by its modern
facilities or its simple style of construction,
but by the man who modestly works
and preaches as its director. Celebrated
throughout the surgical world for his
prolific and proctogerman activities, his
unerring originality of thought, his
numerous perceptive disquisitions and
his personal expositions on the surgery
of the sympathetic nervous system,
Professor René Leriche has made this
clinic a cynosure for students from all
corners of the world.

In order to appreciate more fully the quality of his work, it is necessary to know and appreciate the personality of this really great man. And to do this it would not be inappropriate to give a brief biographical resume. Born on Oct. 12, 1879, at Roanne, France, he completed his early medical training at the University of Lyon and immediately became the student of Jaboulay. He was early attracted by the unusual ability of this young intern. However, Jaboulay's untimely and tragic death occurred soon afterwards, and he then became the student and later the collaborator of that master surgeon, Armand Pouteil, until the latter's death in 1913. It was under such careful training and in such a brilliant environment that the firm foundation for his later development and success was laid. At the termination of his
Internship in 1906 he presented his thesis, "The Resection of the Stomach for Cancer," which remains yet a classic, and in 1910 he became Professor Agost. During the late war he devoted his entire time to military surgery and as a result of his self-sacrificing and distinguished services both the French and Belgian Governments bestowed upon him one of their highest honors. After the war he returned to Lyon and remained there until 1924 when he was called to Strasbourg to occupy the chair of surgery which had recently been left vacant by the untimely death of Lenzert and which had previously been held by such illustrious figures as Shamart, Caillot, Benoist, Lelièvre, Madelung, and Bérard. Since his establishment here, he has continued to add many achievements to his numerous innovations and advances that are so characteristic of his surgical enterprises, meritably conforming to the eulogistic remarks of his inaugural address.
in which he stated: "Vous ne me connaissez pas. J'avais besoin de prendre contact avec vous, autrement que en paroles. J'ai préféré que vous me jugez d'abord any acte."

No better insight can be obtained to his sterling qualities, his moral character and his idealistic attitude than to quote him again from this same eloquent address: "Le professeur de clinique chirurgicale a une triple tâche à remplir. Il doit, en premier lieu, instruire les malades qui lui sont confiées ; il doit apprendre aux étudiants tout ce que peut leur être utile dans leur vie professionnelle future ; il doit enfin tâcher de faire progresser la chirurgie. L'avenir me permettra, je l'espère de vous le montrer." And he has indeed, for he has achieved these three idealistic tasks in his own characteristically modest but undeniably successful manner.
The generous personality of Prof. René Leriche is clearly revealed by his noble and imposing Beethovenian countenance. The high forehead, the clear-blue kind but penetrating eyes, and the strong, determined chin vividly portray and reflect his keen sense of humor, his ever-vigilant morality, his benevolent cordiality, his contagious enthusiasm, and his indomitable resoluteness. The reassuring confidence and the understanding sympathy expressed at the patient's bedside is only commensurate with his unlimited tolerance and his patient consideration towards his students. The spirit of comradeship amongst his assistants, residents, and interns, the pervading atmosphere of enthusiasm in his clinic, and the worshipful admiration of his patients plainly exemplify the charming personality and the admirable characteristics of this great man.

It is in his clinical lectures that he so impressedly demonstrates his incomparable ability as a masterful
Teacher. Although capable of beautiful oratorical eloquence, before his students he speaks in a concise and transparence manner harmonously blending scientific simplicity with pleasing rhetoric. With explicit clarity, he lucidly correlates, the underlying pathological physiology with the more obvious clinical manifestations, indelibly impressing on the minds of his students these essential and fundamental surgical principles.

In the operating theater which is furnished in an agreeable ensemble of pale blue, one is strikingly impressed by the sheer simplicity as well as the technical perfection of the delicate operative manipulations of this master surgeon. Although a better demonstration of more dexterity or less injurious dissection on the living subject would be difficult to conceive, he more forcibly stresses the primary essentials of modern surgery, that the
Present day surgeon must no longer be content with being a mere technician. He must attempt to correct the consequent manifestations of the patient's disorders by first a thorough study and a comprehensive correlation of the underlying pathological anatomy with physiological functions. And this so aptly illustrates the thorough manner in which each patient in his clinic is carefully studied in a sincere attempt to discover the relative importance of the basic physiological processes and thus ascertain the best corrective measures.

The philosophic dissertations, the experimental contributions and the surgical expositions and monographs of Prof. Vrache are too numerous to list and cover an astonishingly wide range of surgical endeavor. And in all his work there is one outstanding characteristic which so aptly portrays the ideal and trend of modern surgery—the continuous search for a more rationalistic comprehension of the physiologic disorders consequent...
to the more apparent anatomical
pathologic processes. His earlier
publications were chiefly concerned with
abdominal surgery and especially that
of the stomach. His keen analytical
and experimental work have added
considerably towards a more rational
conception and a better therapeutic
attack of septic ulceration. In collaboration
with his former chief, Antonin Ponet,
he published a masterful dissertation
on surgical tuberculosis. His in-
valuable contributions on vascular
diseases and surgery of the sympathetic
nervous system have made his name
inseparably linked to this branch of
surgical endeavor. As early as 1915
he directed the attention of surgeons
throughout the world to the operative
procedure of percutaneous sympathetomy
as a means of improving the circulatory
of a limb in the treatment of certain
conditions consequent to vascular ins-
sufficiency. As the procedure was
found, it also relieved pain it was quickly and widely adopted before a more rational understanding of the underlying physiological principles was developed. Naturally, the results have been most varied and confusing and Prof. Lerche himself writing in the (Sept., 1908) Annals of Surgery succinctly and vividly expressed its present status: "The surgery of the sympathetic system meets two kinds of difficulties: those which spring from our physiological ignorance and those which spring from our pathologic ignorance. On one side we do not know the exact significance of the branches we cut, on the other side, we are ignorant as a rule, of the cause and exact mechanism of the diseases we seek to cure."

Not long after the late war, his constantly probing scientific intellect were directed towards the histological development of the various structures which resulted in a newer
conception of organization. In collaboration
with Plicérre he presented three more
advanced ideas in a compendious
and illuminating monograph, "La
Physiologie de l'oe normal et
pathologique," which shed considerable
light on this difficult problem and
opened new sources of possibilities
in its therapeutic application.
There has recently become intensely
interested in studies of the endocrine
glands, particularly the adrenale
and the parathyroids, with special
reference to their surgical consideration.
His studies and perceptive clinical
and experimental investigations have
already made him one of the foremost
authorities in this newer field
of surgical inquiry.

The world wide appreciation of
the entering industry, the unceasing
efforts and the ever productive
activities of Prof. René Leriche is
readily discerned by the numerous and
deserving honors which have been conferred upon him. Respected by his colleagues, admired by his associates, worshiped by his patients, he will always remain in the hearts of those who knew him best, his surgical devotees as a tolerant teacher and a kind and inspiring master. And when the pages of this chapter of medical history have been compiled, his name will conspicuously appear amongst those who have done most towards advancing modern surgical progress.
