INDEX

ABSTINENCE
worksite vs. clinic-based program participants, factors, 489-490

AGE FACTORS
cancer mortality, age-specific rates for white men and women, 229
chronic bronchitis in coal workers, effect with dust exposure and smoking, 299-300
lung function in asbestos workers, smokers vs. nonsmokers, 246-247
lung function in occupationally exposed workers, effect with smoking, 166-167
T lymphocyte changes in asbestos workers, with smoking, 267-269

AIRFLOW OBSTRUCTION
See also LUNG FUNCTION; RESPIRATORY SYSTEM
chronic effects of cotton dust exposure, 420, 422-423
chronic obstructive bronchitis symptom, 183
coal and silica dust exposure as risk factors, 330
coil miners, occupational relationship, 289
coil miners, smoking as factor, 14
coil workers, dust exposure effect in smokers vs. nonsmokers, 313
coil workers, small opacities in pneumoconiosis, relationship, 295-296
coil workers, smokers vs. nonsmokers, 309
cotton workers, smoking as additive risk, 16
individual abnormalities, determination of occupational exposure vs. smoking effects, 168
nonspecific hyperreactivity following exposure to cotton dust, 427

AIRFLOW OBSTRUCTION—Contd.
occupationally exposed workers, patterns of injury in large and small airways, 150-151
silica-exposed workers, pathogenesis, 340
smokers, patterns of injury in large and small airways, 148-150

Amines See AROMATIC AMINES

ANIMAL STUDIES
(See also SMOKE INHALATION, ANIMAL)
carcinogenic effects of uranium ore dust exposure in dogs, 458
carcinogenicity of chemicals in cigarette smoke, effect with radiation, 459
carcinogenicity of cigarette smoke and asbestos, 232-234
industrial pollutants, interactions with tobacco smoke, recommended research, 391
lung function effects of radon daughters, uranium ore dust, cigarette smoke, 464
3-methylcholanthrene and crocidolite asbestos effects in hamster trachea, 234
polycyclic aromatic hydrocarbons and chrysotile asbestos effects in trachea of rats, 234
radiation and cigarette smoke in tumor formation, 456-460

ANTISMOKING MATERIALS
components of controlled worksite smoking modification programs, 486-488
INDEX

Antismoking campaigns See PROGRAMS AND POLICIES; SMOKING CONTROL PROGRAMS; WORKPLACE INTERVENTION PROGRAMS

AROMATIC AMINES
See also OCCUPATIONAL EXPOSURES
betanaphthylamine, carcinogenicity, 371-372
bladder cancer risk, interactive effects with smoking in exposed workers, 383
chemical carcinogenesis as species-specific phenomenon, 371
occupational exposure, disease risks, 359-392
workplace exposures in cancer risk, 370

AROMATIC HYDROCARBONS
See also BENZO(A)PYRENE
asbestos exposure and smoking, interactive effects on metabolism, 237-238
interactive effects with asbestos in animals, 234
lung cancer in exposed workers, relative risk, with smoking, 378

ASBESTOS
See also OCCUPATIONAL EXPOSURES
animal studies of carcinogenic interactions with cigarette smoke, 232-234
carcinogenesis in exposed workers who smoke, mechanisms, 228, 231
carcinogenesis role, tumor promoter vs. initiator, 236-237
carcinogenic risk, establishing dose and exposure levels, 217-219
chest x rays of exposed workers, lowest readings by highest readings, 261
chronic lung disease risk, effect with smoking, 239-266
commercial products, differences as factors in respiratory tract fiber disposition, 200-201
crackles and clubbing in exposed workers, independent effects of smoking, 156
fibers as carriers of carcinogens in cigarette smoke, risk relationship, 238
health effects in chrysotile-exposed smokers vs. nonsmokers, 253
industrial exposure standards and environmental control, public health implications, 270
interstitial fibrosis in exposed populations, smoking relationship, 263-264, 266
intrapulmonary deposition and clearance, effect of chemicals in cigarette smoke, 236-237
low-dose environmental exposure as disease risk factor, 199-200
lung cancer and chronic lung disease, combined risks of exposure and smoking, 199
lung cancer in exposed workers, risk with smoking, 13-14, 378
lung cancer in exposed workers, sex ratio of observed vs. expected deaths, 214
lung cancer in exposed workers, smoking status in risk determination, 206, 210, 213, 216-220
lung cancer in workers, interactive effects of exposure level and smoking category, 219-220
lung cancer risk in exposed smokers vs. nonsmokers, summary and conclusions, 271
lung disease and cigarette smoking in exposed workers, 147
lung function changes in exposed workers, smokers vs. nonsmokers, 241, 243-254
lung injury risk determination, problems, 239-241
mortality, cohort study data by type of exposure, 202-204
observed vs. expected mortality in workers, 227-228
occupational exposure, public health implications, 9-10
principal varieties and structural features, 200-201
pulmonary fibrosis in dockyard workers, by smoking habit and exposure duration, 266
INDEX

ASBESTOS—Contd.
reduction/cessation of exposure and smoking, effect on lung cancer risk, 224-228
restrictive and obstructive lung injury in exposed workers, 151
roentgenographic changes in exposed vs. nonexposed workers, smoking relationship, 259-260, 262
small airways injury in exposed workers, smokers and non-smokers, 256-258
tumors in rodents following exposure, with/without cigarette smoke components, 235

ASBESTOSIS
(See also OCCUPATIONAL DISEASES)
prevalence in asbestos-exposed populations, smokers vs. non-smokers, 263, 265

BACTERIA
endotoxins in cotton bract and byssinosis symptoms in cotton workers, relationship, 424-426

BENZO[PYRENE]
(See also AROMATIC HYDROCARBONS)
carcinogenic interaction with chrysotile asbestos in rats and hamsters, 234
carcinogenicity in animals, interactive effect with radiation, 459

BIRTH COHORTS
lung cancer mortality, occupation and smoking as factors, 102
race- and sex-related changes in smoking habits, 38-53

BLADDER CANCER—Contd.
occupation and smoking, interactive effects, 378-385
occupational groups at risk, smoking as factor, 383
radiation and chemical exposures as risks, with smoking, 381
relative risk for cigarette smoking, lifetime consumption as factor, 380
sex ratio of risk, by smoking habit and occupation, 379-380
truck drivers, diesel exhaust inhalation and smoking in risk, 385

BRAIN CANCER
pesticide-exposed workers, possible risk relationship, 386-387

BRONCHI
(See also BRONCHIOLES, LUNGS)
radiation and cigarette smoke, interactive effects, 483

BRONCHIAL CANCER
uranium miners, influence of radiation exposure and smoking, 450

BRONCHIAL DISEASES
simple and chronic bronchitis, symptoms, 299

BRONCHIOLES
(See also BRONCHI)
inflammatory response and fibrosis, effect of smoking vs. asbestos exposure, 255-256
silica-induced injury, 340

BRONCHITIS
(See also BRONCHIAL DISEASES; LUNG DISEASES; OCCUPATIONAL DISEASES; RESPIRATORY TRACT DISEASES)
age-adjusted association with byssinosis, by smoking status and sex, 412
age-adjusted association with smoking, by byssinosis status and sex, 411
cement workers, dust exposure and smoking as independent risk factors, 187
chronic simple and chronic obstructive bronchitis, symptoms, 183
coal and silica dust-exposed workers, 330

BLADDER CANCER
betanaphthylamine and benzidine manufacturing workers, exposure duration as factor, 371
chemical workers, relative risk, 380
chemical workers, risk of naphthylamines and benzidine exposure, 370
mortality in refinery and chemical workers, study data, 362-363
INDEX

BRONCHITIS—Contd.
coal miners, dust exposure and smoking, risk determination, 184-185
coke oven workers, exposure and smoking as factors, 191
copper smelter workers, exposures and smoking as risk factors, 191
cotton workers, agents responsible for inflammatory response, 424-427
cotton workers, chronic exposure as factor, 429
cotton workers, possible additive effect of dust exposure and smoking, 426
cotton workers, smoking as factor, 410
grain workers, dust exposure and smoking as risk factors, 187-189
occupational exposure, pattern of development, 150
occupational exposures and smoking risks, summary and conclusions, 191
pattern of smoking-related development, 148
silica-exposed miners and other workers, smokers vs. non-smokers, 331-334
simple and chronic bronchitis, symptoms, 299
worksite chemicals or physical agents as cause of occupational bronchitis, 183

BYSSINOSIS—Contd.
cotton textile workers, smoking influence on development, 16, 409-423
cotton workers, correlation with endotoxins in airborne dust, 425
cotton workers, definition of grades, 409-410
cotton workers, prevalence by median dust level, smokers vs. non-smokers, 414
dust levels as factor in cotton workers, 16
expiratory volume in cotton workers with/without disease, smokers vs. nonsmokers, 417
prevalence and severity in cotton workers who smoke, dust exposure level as factor, 432
prevalence data for nine exposure groups, 411
textile mill workers, by grade, smoking status, and dust level, 413
ventilatory deterioration risk in cotton workers with acute symptoms, 423

CANCER
(See also CARCINOGENESIS; OCCUPATIONAL DISEASES)
historical association with tobacco use, 6
Japanese A-bomb survivors, relative risk in smokers vs. nonsmokers, 455
leather industry workers, exposure as risk independent of smoking, 376
mortality, age-specific rates for white men and women, 229
mortality, age-standardized rates with/without asbestos exposure and smoking, 242
mortality, confounding of occupational exposure effects by smoking, 114-122
mortality in rubber workers, study data, 368-369
mortality ratios in metal ore miners, smoking as factor, 343-344
occupational exposure relationship, overview, 7
INDEX

CANCER—Contd.
occupational exposures and smoking as causal factors, 374–388
radiation and cigarette smoke induction in animals, 456–460
radiation and smoking in risk, summary and conclusions, 465
refinery and chemical workers, smoking and exposure as risk factors, 361, 364–366
workers exposed to "pure" silica, standard mortality ratios, 344–345
workplace and smoking, evaluation of interactions, 12
workplace exposures and smoking as risk factors, 101

CARCINOGENESIS
(See also CANCER)
animal studies of interactive effects of cigarette smoke and asbestos, 232–234
animal studies of radiation and cigarette smoke effects, 456–460
aromatic amines, pathway of biotransformation and urinary excretion efficiency, role, 371
concepts of initiation and promotion, 234, 236–239
enzymatic activity of pulmonary alveolar macrophages, role, 237–238
hazardous occupational exposures and smoking, possible synergism, 8
mechanisms in cigarette-smoking asbestos workers, 228, 231
occupational exposures and smoking as initiators and promoters, 107–108

CARCINOGENS
aromatic amines, regulation of workplace exposure, 370
asbestos, problems in establishing carcinogenic dose and exposure levels, 217–219
chemicals in cigarette smoke, interactive effects with radiation in animals, 459–460
disposition and activation, effects of occupational exposure and smoking, 106–107

CANCER—Contd.
occupational exposures and smoking as causal factors, 374–388
radiation and cigarette smoke induction in animals, 456–460
radiation and smoking in risk, summary and conclusions, 465
refinery and chemical workers, smoking and exposure as risk factors, 361, 364–366
workers exposed to "pure" silica, standard mortality ratios, 344–345
workplace and smoking, evaluation of interactions, 12
workplace exposures and smoking as risk factors, 101

CARCINOGENS—Contd.
lung cancer risk of known or suspected occupational exposure, with smoking, 377–378
naphthylamines and benzidine, bladder cancer risk in exposed workers, 370
silica, research recommendations, 347
tobacco smoke at worksite, possible occupational carcinogen in non-smokers, 126
workplace exposures, recommendations for control, 390–391

CELLS
function and structure alterations by asbestos fibers, role in carcinogenesis, 236

CELLS, EPITHELIAL
asbestos as promoter of transformation by carcinogens in cigarette smoke, 239

CESSATION OF SMOKING
(See also REDUCTION OF SMOKING; WORKPLACE INTERVENTION PROGRAMS)
asbestos workers, effect on lung cancer risk, 224–225, 227–228
asbestos workers, to alter future disease risk, 270–271
biochemical verification in controlled worksite modification studies, 486–488
blue-collar vs. white-collar workers, sex differences, 33
blue-collar workers, workplace environment as factor, 10
cotton workers, effect on byssinosis symptoms, 414
controlled studies, data by worksite type, procedural characteristics, 494–495
cotton workers, effect on byssinosis symptoms, 414
controlled studies, design and outcomes, data of smoking modification programs, 486–488
doi:10.1056/NEJM198603053140901
multiple risk factor intervention programs, efficacy for worksites, 500–502
nicotine chewing gum as aid in worksite programs, 495
INDEX

CESSATION OF SMOKING—Contd.
race, sex, and occupation as factors, 53-55
uncontrolled studies, 481-482
workplace program effects, evaluation criteria, 479-480
workplace program participants, consumption level as factor in success, 490-491
workplace program participants, controlled studies, 483, 489-490
workplace program participants, efficacy of social support, physician’s advice, 491-495
workplace programs, recommendations to reduce occupational risks, 391

CESSATION OF SMOKING, METHODS
(See also REDUCTION OF SMOKING; SMOKING CONTROL PROGRAMS; WORKPLACE INTERVENTION PROGRAMS)
monetary incentives and competition in worksite programs, efficacy, 495-498
physician’s advice in worksite programs, efficacy, 493-495
programs used in controlled worksite smoking modification studies, outcome data, 486-488

CHEMICALS
(See also OCCUPATIONAL EXPOSURES)
bladder cancer in exposed workers, risk factor with smoking, 384
occupational exposure, bladder cancer risk, with smoking, 381-382

CHEST X RAY—Contd.
ILO classification system, variability of interpretation, 260
lung injury from occupational exposures and smoking, efficacy for evaluation, 153-155
occupationally exposed workers, effect of smoking, 154-155
pneumococcosis defined as roentgenographic changes produced by coal dust, 290

Chronic airflow obstruction See AIRFLOW OBSTRUCTION; RESPIRATORY SYSTEM

CHRONIC BRONCHITIS
(See also BRONCHIAL DISEASES; BRONCHITIS; LUNG DISEASES; OCCUPATIONAL DISEASES)
chrysotile asbestos workers, prevalence in smokers vs. nonsmokers, 253
coal miners, dust exposure and smoking as factors, with age, 298-300
coal miners, occupational relationship, 289
occupational exposure and smoking, additive effect, 13, 15
silica-exposed workers, dust exposure and smoking as factors, 330, 335
silica-exposed workers, research recommendations, 347
surveys of prevalence, 145-146

CHRONIC LUNG DISEASE
(See also LUNG DISEASES; OCCUPATIONAL DISEASES)
asbestos exposure and smoking, effects of combined exposure, 229-266
etiology, occupational and lifestyle influences, 8
mortality in asbestos workers, smoking as factor, 240-241
occupational exposure relationship, overview, 7
occupationally exposed workers, risk evaluation techniques, 142
occupation-related and smoking-related, relative frequencies, 145
INDEX

CHRONIC LUNG DISEASE—Contd.
- Pneumoconioses, bronchitis, and asthma, occupational exposure risk relationship, 141
- Workplace and smoking, evaluation of interactions, 12

CHRONIC OBSTRUCTIVE LUNG DISEASE
(See also CHRONIC LUNG DISEASE; LUNG DISEASES; OCCUPATIONAL DISEASES)
- ICD addition 1967, effect on time trends in respiratory disease mortality, 143
- Mortality, occupation and smoking as factors, 145

CIGARETTE SMOKE
(See also SMOKE INHALATION, ANIMAL)
- Animal studies of carcinogenic interactions with asbestos, 232-234
- Asbestos fibers as carriers of carcinogens, interactive effect, 238
- Carcinogenic interactions with asbestos, animal studies, 232-234
- Exposure measurement, importance in workplace studies, 161
- Impairment of mucociliary transport and function of phagocytic cells, 236-237
- Large airways, small airways, and parenchyma as sites of lung injury, 148-151
- Tumor induction in animals, radiation effect, 456-460
- Tumors in rodents following exposure to asbestos and smoke components, 235

COFFEE DRINKING
- Bladder cancer risk relationship, 380, 382

COMPENSATION CLAIMS
- Apportioning impairment between occupational causes and cigarette smoking, 170
- Coal workers, establishing independent effects to determine disease causes, 289

COST BENEFITS ANALYSIS—Contd.
- Worksite smoking intervention/control programs, 477

COUGH
(See also RESPIRATORY SYMPTOMS)
- Rubber workers, duration of employment as factor, with smoking, 388-390

COUNSELING
- Physician's advice in smoking cessation programs, efficacy, 493-495

Demographic factors See OCCUPATIONAL GROUPS; OCCUPATIONS

DUST
(See also OCCUPATIONAL EXPOSURES)
- Cement, independent risk factor for bronchitis, with smoking, 187
- Coal dust exposure and bronchitis, risk relationship, 184-185
- Coal dust exposure as emphysema risk in miners, smoking role, 305-308
- Coal dust exposure, underground vs. surface workers, 290
- Coal, exposure area and duration as factors in pneumoconiosis, 294-295
- Cotton, bronchitis and byssinosis risk in exposed workers, with smoking, 16, 412-414
- Cotton, byssinosis in workers, by median dust level, smokers vs. nonsmokers, 414
- Cotton, chronic clinical effects of exposure, 420, 422-423
- Cotton, endotoxins in airborne dust in inflammatory lung injury, 424-426
- Cotton, hemp, and flax, industrial bronchitis and byssinosis in workers, 403
- Cotton, lung cancer and respiratory disease mortality in exposed workers, 429, 431
- Cotton, mechanisms of lung injury, 423-428
- Cotton, nonspecific hyperreactivity to exposure, 427-428

523
INDEX

DUST—Contd.
cotton, standard maximum levels for occupational exposure, 414-415
grain, bronchitis risk factor in exposed workers, with smoking, 187-188
lung diseases in exposed workers, underreporting, 144
ventilatory function effects in coal workers, with smoking, 308-312

EMPHYSEMA
(See also CHRONIC LUNG DISEASE; OCCUPATIONAL DISEASES)
coal workers, dust exposure and smoking in risk, 14, 304, 313
cotton vs. noncotton workers, smokers vs. nonsmokers, 430
cotton workers, smoking as causal factor, 16-17, 428-431, 433
parenchymal injury caused by smoking, 149
radon daughters, uranium ore dust, and cigarette smoke effects in dogs, 458
surveys of prevalence, 145-146
time trends in mortality, effect of changes in ICD categories, 143

ENZYME ACTIVITY
biotransformation of industrial toxicants by smoke constituents, 391
carcinogenesis, stimulation by asbestos, 236-237
carcinogenicity of aromatic amines, role, 371
silica induced lung injury, relation ship, 339-340

ENZYMES
angiotensin-converting enzyme, 340

EX-SMOKERS
(See also NONSMOKERS)
occupational differences, 11

GASTROINTESTINAL CANCER
synthetic fiber factory workers, interaction of exposure and smoking, 387-388

Health education See SMOKING CONTROL PROGRAMS; WORKPLACE INTERVENTION PROGRAMS

HEALTH EXAMINATIONS
chest x ray, efficacy for evaluating occupation and smoking risks, 153-155
occupationally exposed workers, need for smoking information, 131
physiological assessment, efficacy for evaluating occupation and smoking risks, 150-157
respiratory symptoms history to evaluate occupation and smoking risks, 152-153

HEART DISEASES
etiology, occupational and lifestyle influences, 8

IMMUNE SYSTEM
alterations following combined exposure to cigarette smoke and asbestos, 266-270

IMMUNITY
cellular, lymphocyte changes in asbestos workers, smoking habit correlation, 267-270
humoral, immunoglobulins in asbestos-exposed workers vs. cigarette smokers, 266-267

IMMUNOGLOBULINS
IgA and IgG levels in asbestos workers vs. cigarette smokers, 266-267

INCENTIVES
monetary incentives and competition in smoking cessation, efficacy, 495-498

KIDNEY CANCER
mortality in refinery and chemical workers, study data, 362-363
occupations at possible risk, smoking as factor, 385-386

LARYNGEAL CANCER
uranium miners, possible interaction of radiation and smoking, 463

LARYNX
(See also RESPIRATORY SYSTEM)
INDEX

LARYNX—Contd.
radiation and cigarette smoke, interactive effects, 463

LIVER CANCER
occupational groups at risk, 387
solvent-exposed workers, risk relationship, 387

LUNG CANCER
(See also BRONCHIAL NEOPLASMS; OCCUPATIONAL DISEASES)
asbestos-exposed nonsmokers, risk determination, 210–213
asbestos-exposed smokers, risk determination, 213, 216–220
asbestos-exposed workers, sex ratio of observed vs. expected deaths, 214
asbestos-exposed workers, smoking status in risk determination, 205, 210
asbestos exposure, multiplicative risk in smokers, 13
asbestos exposure risk in smokers vs. nonsmokers, summary and conclusions, 271
asbestos workers, expected vs. observed mortality, by smoking habit, 215
asbestos workers, interactive effects of exposure level and smoking category, 219–220
blue-collar workers, odds ratio, 376–377
Canadian fluorspar miners, risk with smoking, 453–454
ccoal dust exposure and smoking in risk, 313
coke oven workers, occupational exposure as factor, 391
gold miners, risk in smokers vs. nonsmokers, 343
histological types, positive association of smoking, 377
historical association with cigarette smoking, 6
hypothesis to reconcile discrepancies in epidemiological data, 461–463
hypothetical distribution in smoking and nonsmoking uranium miners, U.S. white men, 457

LUNG CANCER—Contd.
metal ore miners, smoking as risk factor, 343–344
miners, interaction of smoking and cancer, study data, 447
mortality, causal relationship with smoking, 101–104
mortality in coal workers vs. general population, 301–304
mortality in male asbestos workers, observed vs. expected weighted average probabilities, 233
mortality in men, ratios by age, smoking characteristics, 105
mortality in pesticide-exposed workers, 372–374
mortality in refinery and chemical workers, study data, 362–363
mortality in cotton workers, 429, 431
mortality in refinery and chemical workers, study data, 362–363
mortality in cotton workers, 429, 431
occupational exposure and smoking risks, controlling for independent effects and interactions, 124–125
occupational exposure relationship, smoking status as source of confounding, 115–122
occupational exposure to known or suspected carcinogens, risk with smoking, 376–378
occupational exposures and smoking, causal relationship, 376–378
polonium 210 in cigarette smoke in carcinogenesis, with chemical constituents, 461
race, sex, occupation, and birth cohort as factors, 39–40, 43
radiation and smoking in epidemiology, studies on interactive effects, 455–456
radiation-exposed miners, risk in smokers vs. nonsmokers, 446
radon daughter exposure and smoking as risk factors, 17
reduction/cessation of asbestos exposure and smoking, effect on risk, 224–228
residential exposure as risk factor, research recommendations, 464
silica-exposed workers, 341–348
silicotics, proportional morbidity rate during followup, 345–346
steel workers, risk ratios in smokers vs. nonsmokers, 344
LUNG CANCER—Contd.
Swedish miners, radiation and smoking in risk, 452–453
threshold of risk in asbestos workers, exposure level and smoking as factors, 220–224
uranium miners, induction–latent period in smokers vs. nonsmokers, 451
uranium miners, risk in smokers vs. nonsmokers, 449–452
women, risk factors, 377

LUNG DISEASES
(See also CHRONIC LUNG DISEASE, CHRONIC OBSTRUCTIVE LUNG DISEASE, OCCUPATIONAL DISEASES, PNEUMOCONIOSIS, PULMONARY FIBROSIS, RESPIRATORY TRACT DISEASES)
hazardous occupational exposures and smoking, possible synergism, 8–9
individual relative risk determination, guidelines, 167–169
interstitial fibrosis in asbestos workers, 271
mortality, age-standardized rates with/without asbestos exposure and smoking, 242
mortality in asbestos-exposed workers, smoking status as factor, 201
obstructive and restrictive, role of asbestos exposure and smoking, 241, 243–254
occupational exposure and smoking effects, summary and conclusions, 169–170
occupational exposures and smoking, potential interactions, 159
pneumoconiosis, silicosis, chronic bronchitis in coal workers, 289
pneumonitis in uranium miners, radiation exposure as factor, 464
restriction and obstruction processes in occupationally exposed workers, 151
restrictive and obstructive in asbestos workers who smoke, 271
rubber workers, occupational exposures and smoking as factors, 388–390

LUNG DISEASES—Contd.
silica-exposed copper miners, early study of risk relationship, 328
statistical analysis of independent and interactive effects of smoking, 162–164
survey populations, prevalence of cigarette smoking, 147

LUNG FUNCTION
(See also RESPIRATORY FUNCTION TESTS)
asbestos exposure and smoking, additive effects, 14, 271
asbestos exposure level as factor, 257
asbestos workers, forced expiratory volume in smokers, ex-smokers, nonsmokers, 248
asbestos workers, patterns of change in smokers vs. nonsmokers, 241, 243–254
asbestos workers, predictive equation by smoking status, age, height, 247
chrysotile asbestos workers, profile of smokers vs. nonsmokers, 253
cotton textile workers, dust exposure and smoking as factors, 16, 403, 415–419
cotton workers, smoking as factor, 432
cotton workers, type of dust and exposure level as factors, 419
cotton workers with byssinosis and bronchitis, risk with smoking, 422–423
INDEX

LUNG FUNCTION—Contd.
cotton workers with/without bronchitis or byssinosis, smokers vs. nonsmokers, 417
exspiratory flow and lung volume, asbestos dust exposure relationship, 249-250
foundry workers exposed to silica, effects, 336
occupational exposure effects, simultaneous contribution of aging and smoking, 166-167
physiological assessment in occupationally exposed workers, smoking as factor, 157
prospective study data on silica-exposed workers, 337-338
restrictive vs. obstructive effect of asbestos exposure, smoking as factor, 248-252
rubber workers, duration of employment as factor, with smoking, 306-309
silica-exposed miners and other workers, smokers vs. nonsmokers, 331-334
silica exposure vs. smoking effects, 340-341
uranium miners, ore dust, radiation, smoking effects, 463-464
ventilatory function decline in smokers, 150

LUNG VOLUME
(See also RESPIRATORY FUNCTION TESTS)
asbestos exposure effect in smokers and nonsmokers, 258
asbestos workers, by dust index in nonsmokers vs. smokers, 244
chronic obstructive vs. restrictive lung disease patients vs. normal individuals, 243
coal workers, additive effects of dust exposure and smoking, 308
coal workers with pneumoconiosis, 295
coal workers with/without bronchitis, smokers vs. nonsmokers, 310-312
dust exposure relationship, 249

LUNGS—Contd.
asbestos deposition and clearance, effect of chemicals in cigarette smoke, 236-237
chronic inflammatory destruction in cotton workers, smoking factor, 428-431
coal workers, confounding of dust exposure effects by smoking, 289-290
cotton workers, agents responsible for inflammatory response, 424-427
elastic recoil effects of asbestos exposure and smoking, differences, 258
emphysema, mucus glands, goblet cell metaplasia, pigmentation in smokers vs. nonsmokers, 430
mechanisms of cotton dust-related injury, 423-428
patterns of injury from asbestos exposure and smoking, risk determination, 239
patterns of injury from occupational exposures and smoking, 148-151
silica-exposed workers, mechanisms of injury, 339-341
small opacities in coal workers with pneumoconiosis, smoking effect, 296

LYMPHOCYTES
age and smoking as correlates of changes in asbestos workers, 267-269
Mathematical models See STATISTICAL ANALYSIS

MESOTHELIOMA
wives and children of asbestos workers, risk, 200

MODELING TECHNIQUES
(See also STATISTICAL ANALYSIS, WORKPLACE EXPOSURE STUDIES)
analyses to control potential confounding of occupational exposure by smoking, 129-130

MORBIDITY
(See also OCCUPATIONAL DISEASES, WORKPLACE EXPOSURE STUDIES)
INDEX

MORBIDITY—Contd.
respiratory diseases, smoking as predominant cause, 142
silica exposure effects, early studies, 328

MORTALITY
(See also OCCUPATIONAL DISEASES; WORKPLACE EXPOSURE STUDIES)
asbestos-exposed persons, industrial standards and smoking cessation to reduce risk, 270
asbestos-related, data from cohort studies, 202-204
asbestos workers, observed vs. expected, 227-228
asbestos workers, smoking as factor, 241
bladder cancer in chemical workers, 370-371
bronchial and lung cancer in men, by birth cohort and age at death, 230
bronchial, tracheal, and lung cancer, age-specific rates, white men and women, 229
cancer in rubber workers, 366-370
cancer risk in certain occupations, 375-376
chronic respiratory diseases in 1960, 1970, 1980, by ICD category, 143
cobalt workers, cigarette smoking as major factor, 303-304
lung cancer and chronic lung disease in asbestos workers, smoking as factor, 201
lung cancer, causal relationship with smoking, 101-104
lung cancer in asbestos-exposed workers, expected vs. observed, by smoking habit, 215
lung cancer in asbestos-exposed workers, sex ratio of observed vs. expected, 214
lung cancer in male asbestos workers, observed vs. expected weighted average probabilities, 233
lung cancer in men, mortality ratios by age, smoking characteristics, 105

MORTALITY—Contd.
lung cancer in Swedish miners, radiation and smoking as factors, 452-453
lung cancer in U.S. uranium miners, smoking as factor, 446, 448-452
metal ore miners, pneumoconiosis, tuberculosis, cancer risks, 342
occupational exposure risk, smoking prevalence and age distribution as factors, 127-128
occupationally related, potential confounding by smoking, 114-123
pesticide-exposed workers, 372-374
refinery and chemical workers, smoking and exposure in risk, 361-366
respiratory disease and lung cancer in cotton workers, factors, 429, 431
respiratory diseases in coal workers, 300-304
respiratory diseases, smoking as predominant cause, 142
respiratory diseases, underestimation with vital statistics, 144
selected causes, age-standardized rates with/without asbestos exposure and smoking, 242
time trends for respiratory diseases, effect of changes in disease classifications, 143
tuberculosis and nonmalignant respiratory disease in silica-exposed workers, 327
tuberculosis, silicosis and cancer in silicotics, smoking factor, 347
workplace environment and cigarette smoking as factors, 11

MORTALITY RATIOS
lung cancer and pneumoconiosis in metal ore miners, smoking as factor, 343-344
cancer, confounding of occupational exposure effects by smoking, 114-118
lung cancer in asbestos-exposed vs. control populations, smokers vs. nonsmokers, 216, 218
occupation and smoking effect, control of potential confounding, 123
INDEX

MORTALITY RATIOS—Contd.
silicotics, age at diagnosis and smoking as factors, 346-347

Motivation See INCENTIVES

NATIONAL HEALTH INTERVIEW SURVEYS
(See also SMOKING SURVEYS)
current smokers by sex and selected occupations, 61-63
net change in smoking prevalence by sex and occupation, 1970-1980, 64-65
occupations by category and code, 57
percentage of population in selected occupations, 1978-1980, 66-67

Neoplasms See CANCER

NONSMOokers
(See also EX-SMOKERS)
asbestos workers, confirmation of status to establish disease risk, 210-213
asbestos workers, exposure effects on small airways function, 257
asbestosis prevalence, 264
lung cancer in asbestos-exposed workers, risk determination, 210-213
occupationally exposed, comparison group to control for potential confounding by smoking, 124-126

Obstructive airway diseases See BRONCHIAL DISEASES; EMPHYSEMA; OCCUPATIONAL DISEASES

OCCUPATIONAL DISEASES—Contd.
CANCER; NEUMOCONIOSIS; RESPIRATORY TRACT DISEASES; SILICOISIS; TUBERCULOSIS
acute and chronic respiratory effects of exposure in cotton workers, 420, 422-423
airways inflammation and restriction in cotton workers, causes, 424-428
asbestosis in exposed populations, smokers vs. nonsmokers, 263-264
bladder cancer in chemical workers, exposures and smoking as factors, 378-384
bladder cancer in dye, petroleum, and plastic industries, smoking factor, 383
bladder cancer in truck drivers, smoking factor, 385
bladder cancer in workers exposed to benzidine and betanaphthylamine, smoking factor, 383
bladder cancer in workers exposed to radiation, 381
bronchitis in cement workers, dust exposure and smoking as factors, 186
bronchitis in coal miners, dust and smoking as factors, 185
bronchitis in copper smelter workers, smoking as factor, 191
bronchitis in gold miners, silica exposure and smoking as factors, 186-186
bronchitis in grain workers, dust and smoking as factors, 187-189
bronchitis in welders, additive effect of smoking, 190
byssinosis in cotton textile workers, prevalence of smoking, 147
byssinosis in cotton textile workers, smoking as factor, 16, 400-423
cancer, causal relationship of occupational exposures and smoking, 374-388
cancer, evaluation of smoking and workplace interactions, 12
cancer in pesticide-exposed workers, smoking role, 372-374
chronic bronchitis and chronic airways obstruction in silica-exposed workers, smoking as factor, 15
INDEX

OCCUPATIONAL DISEASES—Contd.
chronic bronchitis in grain workers, prevalence of smoking, 147
chronic bronchitis, smoking and workplace interactions, 13
chronic lung disease, evaluation of smoking and workplace interactions, 12-13
development and organization of 1985 Report, 5
emphysema in coal workers, dust exposure and smoking as factors, 305-308
historical perspective, 6
interstitial fibrosis in asbestos-exposed populations, 263, 265-266
large bowel cancer in synthetic fiber factory workers, smoking effect, 387-388
liver cancer in farm laborers, risk relationship, 387
liver cancer in solvent-exposed workers, 387
lung cancer and chronic lung disease in asbestos workers, smoking factor, 201
lung cancer and respiratory disease mortality in cotton workers, 429, 431
lung cancer in asbestos-exposed nonsmokers, risk determination, 210-213
lung cancer in asbestos-exposed smokers, risk determination, 213, 216-220
lung cancer in asbestos workers, interactive effects with smoking, 219-220
lung cancer in asbestos workers, sex ratio of observed vs. expected deaths, 214
lung cancer in asbestos workers, smoking status in risk determination, 205, 210
lung cancer in coke oven workers, exposure risk, 391
lung cancer in miners, induction-latent period in smokers vs. nonsmokers, 451
lung cancer in miners, interactive effect of smoking, study data, 447-448

OCCUPATIONAL EXPOSURE STANDARDS
asbestos, for reduction of interstitial fibrosis in workers, 270
cotton dust, development of maximum exposure levels, 414-415

OCCUPATIONAL EXPOSURES
(See also AROMATIC AMINES; AROMATIC HYDROCARBONS; ASBESTOS; CHEMICALS; DUST; PESTICIDES; PETROCHEMICALS; RADIATION; SILICA)
asbestos, chronic lung disease risk, effect with smoking, 239-266
asbestos, disease risks in exposed workers, smoking status as factor, 201, 205
asbestos, duration effect on fibrosis, additive risk in smokers, 264, 266
INDEX

OCCUPATIONAL EXPOSURES—Contd.

- asbestos, establishing risk threshold, smoking as factor, 223-224
- asbestos, mechanisms of carcinogenesis in workers who smoke, 228, 231
- asbestos, observed vs. expected mortality by years since initial exposure, 228
- asbestos, public health implications, 9
- asbestos, reduction/cessation of exposure and smoking, effects, 224-228
- asbestos, relative risk of lung cancer, with smoking, 378
- benzidine and betanaphthylamine, bladder cancer risk, with smoking, 383-384
- biological interactions with smoking, 104, 106-109
- cancer risk relationship, with smoking, 101
- carcinogens, recommendations for control, 390-391
- causal relationship with specific diseases, with smoking, 374-390
- cement dust and smoking, independent risk factors for bronchitis, 187
- chemicals, bladder cancer risk, with smoking, 381-382
- chronic disease epidemiology, factor with smoking, 8
- chronic lung disease risk relationship, 141
- coal dust, bronchitis risk factor with smoking, 185
- coal dust, control to reduce pneumoconiosis prevalence, 312-313
- coal dust, disease risk, with smoking, 298-299
- coal dust in miners, emphysema risk, smoking role, 305-308
- combustion effluents, inhalation and smoking as bladder cancer risk factors, 384
- control of smoking and exposure levels to reduce disease risk, 11
- cotton dust, acute effect on respiratory symptoms, with smoking, 409-410, 412-415
- cotton dust, byssinosis and bronchitis risk in workers who smoke, 16
- cotton dust, chronic clinical effects, 420, 422-423
- cotton dust, expiratory volume in smokers vs. nonsmokers with/without disease, 417
- cotton dust, exposure level and smoking in bronchitis and byssinosis risk, 412-413
- cotton dust, job category as factor in byssinosis risk, 403
- cotton dust, respiratory disease and lung cancer mortality in exposed workers, 429, 431
- cotton dust, smoking influence on byssinosis development, 403-423
- cotton dust, type and exposure level as factor in lung function effects, 419
- lung disease relationship, evaluation methods, 151-157
- lung disease risk, with smoking, summary and conclusions, 169-170
- lung function effects, simultaneous contribution of aging and smoking, 166-167
- lung injury patterns, comparison with smoking-related injury, 146-151
- pesticides, mortality in exposed workers, 372-374
- petrochemicals, aromatic amines, pesticides, risks with smoking, 15, 359-392
- petrochemicals, bladder cancer risk, tobacco use as factor, 382
- polycyclic aromatic hydrocarbons, relative risk of lung cancer, with smoking, 378
- polyvinyl chloride and vinyl chloride, bronchitis risk relationship, 189
- "pure" silica, cancer risks, 344-345
- radiation, bladder cancer risk, with smoking, 381
- radiation in miners, lung cancer risk, 446
- rubber processing, lung function effects, 388-390
INDEX

OCCUPATIONAL EXPOSURES—
Contd.
silica, chronic bronchitis symptoms in exposed workers, smoking interactions, 185-186
silica, disease risk with smoking, 15, 323-348
silica exposure in uranium miners, risks with smoking, 463-464
silica, importance of "free" vs. "combined" forms in occupational toxicity, 323
silica, lung cancer risk relationship, 341-348
silica, lung function and respiratory diseases in smokers vs. non-smokers, 330, 335
silica, noncompliance with permissible exposure limit, 323
silica, population at risk, NIOSH survey, 323-324
silica, prospective study data on exposed workers, 337-338
silica, research recommendations, 347-348
silica, respiratory disease risk, role of smoking, 325
silica, smoking characteristics of exposed workers, 326
silica, summary and conclusions about disease risk, 348
solvents, risk of liver cancer in exposed workers, 387
statistical interactions with smoking effects, 104, 109-113
uranium ore dust, lung cancer risk in miners, 446-452, 457

OCCUPATIONAL GROUPS—
(See also OCCUPATIONS)
blue-collar workers, birth cohort, occupation, sex as factors in smoking, 38-55
blue-collar workers, efficacy of smoking intervention programs, 499
blue-collar workers, smoking prevalence by age and sex, 23-26
blue-collar workers, workplace environment as factor in smoking behavior, 10
clerical and kindred occupations, female smoking by birth cohort, 74
craftsmen and kindred workers, current smoking by sex, 58-59, 61, 64
cotton, hemp, and flax workers, health effects of dust exposure, 403
craftsmen and kindred workers, current smoking by sex, 58-59, 62, 64
craftsmen or kindred occupations, male smoking by birth cohort, 71
farm workers, current smoking by sex, 58-59, 62, 65
laborers, except farm, current smoking by sex, 58-59, 62
managers and administrators, current smoking by sex, 58-59, 61, 64
managers and administrators, male smoking by birth cohort, 70
managers and salesmen, relative risk of bladder cancer, 381
miners, disease risk of silica exposure in miners vs. nonsmokers, 331-334
operatives and kindred occupations, male smoking by birth cohort, 72
operatives and kindred workers, current smoking by sex, 58-59, 62
operatives, except transport, current smoking by sex, 62, 64
professional, technical, and kindred occupations, female smoking by birth cohort, 73
professional, technical, and kindred occupations, male smoking by birth cohort, 69
professional, technical, and kindred workers, current smoking by sex, 58-59, 61, 64
sales workers, current smoking by sex, 58-59, 61, 64
service workers, current smoking by sex, 58-59, 63, 65
transport operatives, current smoking by sex, 58-59, 62, 64
transport, service, manufacturing, construction workers, lung cancer risk, 375
INDEX

OCCUPATIONAL GROUPS—Contd.
white-collar workers, birth cohort, occupation, sex as factors in smoking, 38-55
white-collar workers, smoking prevalence by age and sex, 23-25
workers at high risk, three approaches for smoking intervention, 498-500

OCCUPATIONAL LUNG DISEASES
(See also LUNG DISEASES; OCCUPATIONAL DISEASES)
occupational bronchitis, worksite chemicals or physical agents in risk, 183
prevalence not comprehensively documented, 146
underestimation of affected workers, 144-146

OCCUPATIONS
(See also OCCUPATIONAL GROUPS)
coal workers, 14, 289
coal workers, smoking habits, 291
coke oven workers, 191
coke oven workers, lung cancer risk, 391
construction workers, smoking habits by age, 85
copper miners, silica-induced lung injuries, 328
copper smelter workers, 191
cotton textile mill workers, 147
cotton textile workers, smoking influence on byssinosis development, 403-423
cotton workers, byssinosis, bronchitis, smoking effects on lung function, 418-419
cotton workers, exposure effects on lung function, with smoking, 415-419
cotton workers, smoking habits, 404, 409
cotton workers, study data on smoking prevalence, 405-408
data entry operators, smoking habits by age and sex, 85
dentists, smoking habits by age and sex, 86
disabled, smoking habits by age and sex, 86
dockyard workers, 266
dentists, smoking habits by age and sex, 86
deck workers, 266
dentists, smoking habits by age and sex, 86
education, smoking habits by age and sex, 86
electricians, smoking habits by age and sex, 87
electricians, smoking habits by age and sex, 87
electricians, smoking habits by age and sex, 87
executives, smoking habits by age and sex, 87
factory workers, smoking habits by age and sex, 87
farm laborers, liver cancer risk, 387
farm workers, 147
farmers, smoking habits by age and sex, 88
firefighters, smoking habits by age, 88
food preparation workers, smoking habits by age and sex, 88
foremen, smoking habits by age, 88
INDEX

OCCUPATIONS—Contd.

foundry workers exposed to silica, lung function effects, 335-336

foundry workers exposed to silica, lung function effects, 335-336

gold miners, 186
gold miners, cancer risk, 342-343

grain workers, 147

grain workers exposed to silica, lung function effects, 336

heavy equipment operators, smoking habits by age, 89

hospital workers, smoking habits by age and sex, 89

housewives, smoking habits by age, 89

law enforcement workers, smoking habits by age, 89

lawyers, smoking habits by age and sex, 90

leather industry workers, cancer risk independent of smoking, 376

leather workers, bladder cancer risk, 379-380

machine operators, smoking habits by age and sex, 90

maids, smoking habits by age and sex, 90

maintenance workers, smoking habits by age and sex, 90

managers, smoking habits by age and sex, 91

metal ore miners, respiratory cancer risk, 342

military personnel, smoking habits by age, 91

miners, smoking habits by age, 91

nursing personnel, smoking habits by age, 91

office workers, smoking habits by age and sex, 92

painters, smoking habits by age, 92

pesticide-exposed workers, risks, 359-360, 372-374

pesticide workers, cancer risks, 372-374

petrochemical workers, bladder cancer risk, 382

pharmacists, smoking habits by age and sex, 92

photo and printing workers, smoking habits by age, 92

plumbers, smoking habits by age, 93

534

OCCUPATIONS—Contd.

polyvinyl chloride and vinyl chloride workers, 189

postal service workers, smoking habits by age and sex, 93

pottery workers, silicosis prevalence, 328

printers, smoking habits by age and sex, 93

railroad workers, smoking habits by age, 93

real estate workers, smoking habits by age and sex, 94

refinery and chemical workers exposed to petrochemicals, risks, 359-392

refinery and chemical workers, smoking and exposure in mortality risk, 361-366

rubber curing workers, 191

rubber workers, bladder cancer risk, 379-380

rubber workers exposed to aromatic amines, risks, 359, 366-370

sales people, smoking habits by age and sex, 94

shipyard workers, lung cancer risk, 375

silica-exposed workers, risks, 15, 323-347

social workers, smoking habits by age and sex, 95

steel mill workers, smoking habits by age, 94

steel workers, lung cancer risk, 344

Swedish miners, lung cancer risk in smokers vs. nonsmokers, 452-453

technicians, smoking habits by age and sex, 95

telephone operators, smoking habits by age, 95

textile and garment industry workers exposed to aromatic amines, risks, 359, 370-372

textile workers, smoking habits by age and sex, 95

truck drivers, bladder cancer risk, 385

truck drivers, lung cancer risk, 375

truck drivers, smoking habits by age and sex, 95

unemployed workers, smoking habits by age and sex, 96
INDEX

OCCUPATIONS—Contd.
uranium miners, 147
uranium miners, pulmonary effects of exposure and smoking, 463-464
uranium miners, radiation and smoking in lung cancer risk, 446-452
uranium miners, smoking habits, 448
waiters/waitresses, smoking habits by age, 96
welders, 189
welders, smoking habits by age, 96
woodworkers, smoking habits by age, 96

PANCREATIC CANCER
daily cigarette consumption as factor in risk, 387

PASSIVE SMOKING
lung cancer risk, with radon daughter exposure, research recommendations, 464
occupational hazards, possible confounding of risk in nonsmokers, 126

PESTICIDES
(See also OCCUPATIONAL EXPOSURES)
brain neoplasms in exposed workers, possible risk relationship, 386-387
mortality in exposed workers, 372-374
occupational exposure, disease risks, 359-392

PETROCHEMICALS
(See also OCCUPATIONAL EXPOSURES)
mortality in exposed workers, 361-366
occupational exposure, disease risks, 359-392

PNEUMOCONIOSIS—Contd.
can workers pneumoconiosis and progressive massive fibrosis, prevalence, 294-295
cal workers, standard mortality ratios vs. general population, 300-301
disability payments vs. estimated prevalence, 146
disease definition, 290
dust exposure as major etiologic factor in coal workers, 312-313
mortality ratios vs. cancer in metal ore miners, smoking as factor, 343-344
silica-exposed miners and other workers, 331-354

Prevention of smoking See PROGRAMS AND POLICIES; SMOKING CONTROL PROGRAMS, WORKPLACE INTERVENTION PROGRAMS

PROGRAMS AND POLICIES
(See also SMOKING CONTROL PROGRAMS; WORKPLACE EXPOSURE STUDIES; WORKPLACE INTERVENTION PROGRAMS)
economic advantages/disadvantages of worksite programs, 477-479
Johns Manville antismoking policy, cessation program, 499-500
worksite smoking control programs, 477-510

PULMONARY FIBROSIS
(See also LUNG DISEASES; OCCUPATIONAL DISEASES)
animals exposed to cigarette smoke and asbestos, 234
asbestos-exposed populations, smoking relationship, 263-264, 266
asbestos exposure as risk factor, 14, 239-240
asbestos-induced, abnormal chest x-ray as indicator, 259
dockyard workers, by smoking habit and asbestos exposure, 266
fibrosing alveolitis in silica-exposed workers, smoking role, 325
nonexposed vs. exposed asbestos workers, smoking relationship, 250-260, 262
INDEX

PULMONARY FIBROSIS—Contd.
silica exposure as factor, enzyme activity in pathogenesis, 339
uranium miners, exposure effects, with smoking, 463–464
Pulmonary function See LUNG FUNCTION

PULMONARY MACROPHAGES
enzymatic activity, influence in carcinogenesis, 237–238
silica cytotoxicity in pathogenesis of fibrosis, 339
small airways of smokers, pattern of lung injury, 148–149

RACE FACTORS
black blue-collar workers, smoking rates, 11
smoking prevalence, birth cohort, sex, occupation as factors, 42–46, 48–55

RADIATION
(See also OCCUPATIONAL EXPOSURES)
bladder cancer risk, with smoking, 381
bronchial cancer risk in uranium miners, with smoking, 450
cancer risk, with smoking, summary and conclusions, 465
human exposure levels from radon daughters, 445–446
Japanese A-bomb survivors, cancer risk in smokers vs. nonsmokers, 455
lung cancer epidemiology, studies on interactive effects with smoking, 455–456
lung cancer in Swedish miners, risk factor with smoking, 452–453
polonium 210 from tobacco smoke as cancer risk, 460–461
pulmonary effects in uranium miners, with smoking, 463–464
radon daughters, interactive effects with cigarette smoke exposure, 17
residential exposure, lung cancer risk with smoking, 454

REDUCTION OF SMOKING—Contd.
PROGRAMS; WORKPLACE INTERVENTION PROGRAMS)
biochemical verification in controlled worksite modification studies, 486–488
birth cohorts, by race, sex, and occupation, 41–52
controlled studies, data by worksite type, procedural characteristics, 484–485
controlled studies, design and outcome data of smoking modification programs, 486–488
worksite participants, controlled studies, 483, 489–490
worksite program effects, evaluation criteria, 479–480
worksite program participants, long-term effects, 491

RESEARCH RECOMMENDATIONS
(See also WORKPLACE EXPOSURE STUDIES)
animal studies of health effects of tobacco smoke and industrial pollutants, 391
cancer risk with occupational exposure and smoking, 12
chronic lung disease risk with occupational exposure and smoking, 12–13
health effects of occupational exposures and smoking, epidemiologic studies, 391
industrial pollutants, identifying constituents as cancer initiators/promoters, 391
lung cancer risk in occupationally exposed workers, 464
lung function effects in occupationally exposed smokers, 169
lung impairment, apportioning risk between occupational exposure and smoking, 170
methodology and evaluation issues in worksite smoking modification, 507–509
occupational exposure to specific agents, interactive effects with smoking, 169
occupational exposures, 347–348
passive smoking risks, 464
INDEX

RESEARCH RECOMMENDATIONS
Contd.
statistical analysis of occupational exposure and smoking interactions, 169
workplace smoking intervention programs, 17, 507-509

RESEARCH FUNCTION TESTS
(See also LUNG FUNCTION)
workers and smokers, patterns of lung function changes, 241, 243-254
chrysotile asbestos workers, percentage decline in smokers vs. non-smokers, 253
coil miners, 296-297, 311-312
coil workers, dust exposure and smoking effects, 308-312
coil workers, face workers vs. surface workers, 309
cotton dust exposure and smoking, effects, 415-419
expiratory volume in cotton workers, smokers vs. nonsmokers, 416-418
expiratory volume in men, byssinosis, bronchitis, and smoking effects, 418
expiratory volume in women, byssinosis, bronchitis, and smoking effects, 419
flow rates in asbestos workers, by dust index in smokers vs. nonsmokers, 245
rubber workers, duration of employment as factor, 388
silica exposed foundry workers, 396
ventilatory capacity in coal workers, 304

RESEARCH SYMPTOMS—Contd.
silica-exposed workers, chronic bronchitis risk factor with smoking, 186
silica-exposed workers, dust exposure and smoking as factors, 330, 335
standardized questionnaire to evaluate occupation and smoking effects, efficacy, 152-153
workplace exposures in non-smokers, occupational bronchitis criteria, 184

RESEARCH SYSTEM
(See also BRONCHI; BRONCHIOLES; LARYNX; LUNGS)
airflow obstruction as symptom of chronic obstructive bronchitis, 183
occupationally exposed workers, patterns of injury, 151
pulmonary responses to silica exposure, smoking as factor, 325
radiation and cigarette smoke, interactive effects, 463-464
smokers, patterns of injury in large and small airways and parenchyma, 148-151
ventilatory function in coal workers, dust exposure and smoking effects, 308-312

RESEARCH TRACT DISEASES
(See also BRONCHIAL DISEASES; EMPHYSEMA; LUNG DISEASES; OCCUPATIONAL DISEASES)
coil miners, dust exposure and smoking as factors, 14, 15
historical association with coal mining, 289
morbidity and mortality, smoking as predominant cause, 142
mortality from nonmalignant diseases in silica-exposed workers, 327
mortality in coal workers, 300-304
mortality in cotton workers, 429, 431
mortality in refinery and chemical workers, study data, 362-363
mortality, underestimation with vital statistics, 144
RESPIRATORY TRACT DISEASES
Contd.
silica-induced, dust concentration and exposure duration in risk, 326-329
silica-related, physical factors of occupational exposure, 325
ventilatory disability in coal workers, cessation of smoking for reduction, 313

RISK THRESHOLD
asbestos exposure, confounding by cigarette smoking as source of bias, 222
lung cancer in asbestos workers, smoking as source of bias, 222-224

RISK REDUCTION
lung cancer, cessation of asbestos exposure effect, 225-228
respiratory disease in coal miners, dust control and smoking cessation, 312-313

SEX RATIO
(See also OCCUPATIONAL GROUPS; OCCUPATIONS; SMOKING HABIT; WOMEN)
bladder cancer risk, by smoking habit and occupation, 379-380
changes in smoking prevalence for selected occupations, 64-65
cotton workers, smoking habits, 404
current smokers by sex, occupation, amount smoked, 58-63
daily cigarette consumption by age and occupation, 27-31
employment patterns and smoking prevalence, 23-26
General Electric Company employees, smoking status by occupational category and age, 78-81
lung cancer in asbestos-exposed workers, observed vs. expected deaths, 214
occupation and smoking behavior, current estimates and trends, 11 occupational categories, smoking habits by age, 83-96
selected occupations, 60-68

SILICA
(See also OCCUPATIONAL EXPOSURES)
538

SILICA—Contd.
cancer risk in exposed workers, 341-348
definitions of health effects, 325
disease risk in exposed smokers vs. nonsmokers, 331-334
disease risk in exposed workers, summary and conclusions, 348
epidemiological findings among exposed workers, 327-330, 335-336
"free" vs. "combined" forms, importance to occupational toxicity, 323
industries with significant silica or mixed dust exposures, 323
pathogenesis of related health effects, 339-341
population at risk for exposure, NIOSH survey, 323-324
prospective study data on exposed workers, 337-338
pulmonary effects in uranium miners, with radiation and smoking, 463-464
research recommendations on health effects, with other exposures and smoking, 347-348

SILICOSIS
(See also OCCUPATIONAL DISEASES; PNEUMOCONIOSIS)
cancer risk in exposed workers, 341-348
definitions of health effects, 325
disease risk in exposed smokers vs. nonsmokers, 331-334
disease risk in exposed workers, summary and conclusions, 348
epidemiological findings among exposed workers, 327-330, 335-336
"free" vs. "combined" forms, importance to occupational toxicity, 323
industries with significant silica or mixed dust exposures, 323
pathogenesis of related health effects, 339-341
population at risk for exposure, NIOSH survey, 323-324
prospective study data on exposed workers, 337-338
pulmonary effects in uranium miners, with radiation and smoking, 463-464
research recommendations on health effects, with other exposures and smoking, 347-348

SKIN CANCER
radiation and cigarette smoke condensate in induction in animals, 456-458

SMALL AIRWAYS
(See also RESPIRATORY SYSTEM)
INDEX

SMALL AIRWAYS—Contd.
abnormalities in chronic obstructive lung disease, 255
asbestos exposure and smoking effects, 271
changes in smokers, consumption and duration of habit as factors, 255
dysfunction in asbestos workers, differences in exposure and smoking effects, 258
pattern of injury in asbestos-exposed workers, 256

SMALL AIRWAYS DISEASE
(See also OCCUPATIONAL DISEASES, RESPIRATORY TRACT DISEASES)
silica-exposed workers, research recommendations, 347

SMOKE INHALATION, ANIMAL
emphysema induction in dogs, with radon daughters and uranium ore dust, 458
lung cancer induction in rats, with radon daughter exposure, 458

SMOKING
(See also WORKPLACE SMOKING)
statistical analysis of independent and interactive effects with occupational exposures, 162-164
synergistic vs. additive effect with occupational exposures, 360-361
workplace, environment as factor in initiation, 32

SMOKING CONTROL PROGRAMS
(See also WORKPLACE INTERVENTION PROGRAMS)
clinic-based vs. worksite programs, validity of comparisons, 489
design and outcome of controlled worksite smoking modification studies, 486-488
organizational characteristics, other factors in program success, 502-504
primary objectives of worksite smoking modification programs, 508-509
recruitment strategies of various worksite programs, participation/attrition rates, 484-485

SMOKING CONTROL PROGRAMS—Contd.
silica-exposed populations to reduce disease risk, 348
social support, physician's advice, nicotine gum, incentives, efficacy, 491-498
worksite, evaluation criteria, 479-480
worksite, implementation, 504-506
worksite, overview of advantages vs. disadvantages, 477-479
worksite programs to modify smoking, three approaches, 503-504
worksite, review of uncontrolled vs. controlled studies, 481-483, 489-490

SMOKING HABIT
(See also OCCUPATIONAL GROUPS, OCCUPATIONS, SMOKING PREVALENCE, WORKPLACE SMOKING)
asbestos-exposed workers, multiplicative interactive effects, 9
asbestos workers, controlling for differences to reduce confounding, 219
asbestos workers, synergistic effect on chronic lung disease mortality, 240-241
birth cohorts, race- and sex-related changes in prevalence, 38-53
blue-collar vs. white-collar workers, by sex and age, 23-26
blue-collar vs. white-collar workers, initiation by age and sex, 29-32
coal miners, chronic simple bronchitis risk factor, with occupational exposure, 185
coal miners, study data on smoking characteristics, 291-293
cotton dust-exposed workers, 404, 409
cotton workers, disease risks, 16-17
General Electric Company employees 1985, by occupational category, age, sex, 78-81
gold miners, effect with silica exposure on bronchitis symptoms, 186
male birth cohorts 1900-1978, changes in prevalence, 231
Navajos in U.S. uranium miner study group, 448, 451
INDEX

SMOKING HABIT—Contd
pancreatic cancer patients, daily consumption as factor, 387
white U.S. uranium miners vs. nonminer men, 448

SMOKING PREVALENCE
(See also OCCUPATIONAL GROUPS; OCCUPATIONS; SMOKING HABIT; WORKPLACE SMOKING)
asbestos-exposed workers, study data, 206-209
blue-collar vs. white-collar workers, 11
civilian male birth cohorts 1900-1978, 230
cotton workers, study data, 405-408
civilian radiation-exposed miners, 446
uranium miners, 448

SMOKING SURVEYS
American Cancer Society, by occupation, sex, age, 82-96
civilian coal miners, prevalence data, 291-293
daily cigarette consumption by occupation for men and women, 27-31
General Electric Company employees 1985, by sex, age, amount smoked, 78-81
National Health Interview Surveys, employment patterns and smoking prevalence, 23-26
National Health Interview Surveys for 1978-1980, by sex and occupation, 58
National Health Interview Surveys, occupations by category and code, 37
petrochemical, aromatic amine, and pesticide industries, prevalence, 360
silica-exposed workers, study data, 325-326

SOCIOECONOMIC STATUS
bladder cancer risk relationship, 381-382

STATISTICAL ANALYSIS
independent and interactive effects of smoking and occupational exposures, 162-164
interactions between occupational exposures and smoking, 104, 109-113
occupational exposure effect on disease risk, confounding by smoking, 114-123
occupational exposures and smoking, quantifying interactive effects, 158
occupational exposures, confounding of risk by smoking, use of comparison groups, 122-130
occupational risks, comparability of internal and external control groups, 166

THIOCYANATES
serum level measurement to document smoking status in workplace studies, 161

TOBACCO SMOKE
aromatic amines, possible role in carcinogenesis, 371-372
environmental levels as risk factor in nonsmokers, 199-200

TUBERCULOSIS
(See also OCCUPATIONAL DISEASES)
mortality in silica-exposed workers, 327
silica-induced, smoking role, 325
workers exposed to "pure" silica, standard mortality ratios, 346

Tumorigenesis See CARCINOGENESIS

Tumors See CANCER

URANIUM
(See also OCCUPATIONAL EXPOSURES; RADIATION; SILICA)
dust, carcinogenic effects in dogs, 458
lung cancer in miners, exposure and smoking risks, 446-452
miners, smoking habits, 448
pulmonary effects of exposures, with smoking, 463-464

WOMEN
lung cancer risks, 377
INDEX

Workplace See OCCUPATIONAL GROUPS; OCCUPATIONS

WORKPLACE EXPOSURE STUDIES
(See also RESEARCH RECOMMENDATIONS)
asbestos, establishing risk threshold, smoking as factor, 224-225 asbestos-related mortality, data by type of exposure, 206-209 cancer mortality relationship, smoking status as source of confounding, 114-122 case-control analyses to control confounding by smoking, 129-130 chest x ray abnormalities in workers, smoking effect, 154-155 chronic lung disease in occupationally exposed workers, 142-148 confounding by smoking behavior, sources and control, 114-130 control of potential confounding by smoking, use of comparison groups, 123 cotton workers, respiratory system effects, with smoking, 403-431 duration and concentration of exposure, determination methods, 162 external control populations, comparability with exposed group, 166 healthy worker effect in cross-sectional design, smoking role, 164 healthy worker effect on mortality risk evaluation, 128 high-risk populations, need for data on smoking intervention efficacy, 498-500 internal controls, comparable smoking status to control confounding, 129 lung disease risk, with smoking, summary and conclusions, 169-170 mortality risk, adjustments when smoking habits not known, 130-131 occupation and smoking risks, use of external vs. internal controls, 123-130 occupational lung disease and cigarette smoking, prevalence in survey populations, 147

WORKPLACE EXPOSURE STUDIES—Contd.
physiological assessment of workers, independent effects of smoking, 156 quantification of relative risk in individuals, 167 quantifying effects in populations, concepts of smoking interactions, 158-160 quantifying occupational and smoking risks, 160-168 questionnaire to establish smoking status recommended, 161 relative risk of cancer, smoking status as source of confounding, 115-122 silica, prospective study data on exposed workers, 337-338 silica, research recommendations on health effects, with other exposures and smoking, 347-348 statistical analysis of independent and interactive effects of smoking, 162-164

WORKPLACE INTERVENTION PROGRAMS
(See also RESEARCH RECOMMENDATIONS; SMOKING CONTROL PROGRAMS)
asbestos workers, efficacy for smoking reduction/cessation, 499-500 controlled, characteristics, 483, 489-490 controlled studies, data by worksite type, procedural characteristics, 484-488 design and outcome data from controlled smoking modification studies, 486-488 evaluation criteria, 479-480 general results and research needs, 17-18 high-risk populations, large-scale studies needed, 498-500 implementation, 504-506 methodological deficiencies in comparison conditions, participation rates, 491 methodological issues in program design, evaluation criteria, 507-508 monetary incentives and competition, efficacy, 495-498
multiple risk factor intervention programs, efficacy for smoking cessation, 490
organizational characteristics, other factors in program success, 502-504
overview of smoking control programs, advantages vs. disadvantages, 477-479
participant characteristics, program intensity, worksite size, outcome effects, 489-490
physician’s advice, efficacy, 493-495
program characteristics, advantages/disadvantages of various approaches, 500-506
recommendations for future research, 507-509
research needed on variables that affect program success, 504
review, uncontrolled vs. controlled studies, 481-483, 489-490
social support for nonsmoking, relevance in worksite programs, 491-493
summary and conclusions, 509
uncontrolled, without objective measures of smoking status, cessation rates, 482

INDEX

WORKPLACE INTERVENTION PROGRAMS—Contd.

WORKPLACE SMOKING
(See also SMOKING; SMOKING HABIT; SMOKING PREVALENCE)
asbestos workers, multiplicative interactive effects, 9
biological, statistical, and public health interactions with occupational exposures, 104-113
cotton workers, disease risks, 16-17
lung disease risk, independent and interactive effects with occupational exposures, 142
occupational categories, by age and sex, 83-90
occupational environment as factor in initiation, 32
occupational exposure studies, potential for confounding, 114-130
occupationally exposed workers, control groups to reduce potential confounding effect, 123
recent changes by occupation, age, and sex, 33-38
workers exposed to respiratory hazards, lung disease risk, 146-150

WORKSITE See OCCUPATIONAL GROUPS; OCCUPATIONS
