Professor S.E. Luria  
Department of Biology  
Massachusetts Institute of Technology  
Cambridge, Massachusetts  

Dear Professor Luria:

I appreciated very much having the opportunity last week-end to tell you how much I hope you will decide to remain at Illinois. As you know from our joint conference with them, Provost Ray and Dean Wall strongly share this hope and will support to the limit of their resources the effort to match the fine opportunity extended to you by Massachusetts Institute of Technology. The officers and faculty of all five biological departments have also strongly urged that every possible effort be made to keep you here.

Concerning salary, I am happy to say that we can match the offer of $19,000 for the academic year made to you by Massachusetts Institute of Technology. I realize that salary alone will not be the most important consideration in your decision as between Illinois and M.I.T. — still, clearly we should not want you to be penalized salary-wise in order to remain here.

I am happy to say also that the executive officers of the five biological departments are all unanimous in recommending you for appointment to the proposed new Center for Advanced Study in the Graduate College. I am certainly happy to lend my strong endorsement to this recommendation, and Dean Wall has indicated that he would approve it. Provost Ray assures me that there is no doubt now but that the Center will be established. We should all very much to have you included among the first and most distinguished group of research scholars appointed to this new body. I believe that Dean Wall has already sent to you the general plans for the Center and the statement of its purposes.

The plan for the establishment of a school of biology is progressing very well, although a considerable amount of work remains to be done before a formal proposal can be
submitted to the Board of Trustees. I enclose a first draft of a statement that outlines the administrative structure and functions of the school. We should greatly appreciate any comments or suggestions you might wish to make concerning these proposals. I feel certain that this general type of organization will greatly strengthen the biological sciences at Illinois, and we should like to establish it on the soundest possible foundation. In matters affecting faculty appointments, curriculum, facilities, and relations with outside agencies, this type of administrative mechanism should help us to develop at Illinois one of the really outstanding centers of biological science in the world. Already the recurring budgets of the constituent departments total almost a million dollars per year, and substantial additions to them will undoubtedly be made in the coming biennium.

In the matter of space, the new building just finished and the proposed new N.I.H. research unit should provide fairly well for our immediate needs. I am happy to report, further, that the University Building Program Committee just two days ago has reviewed the situation of the biological departments and has tentatively decided that those remaining in old buildings should be moved into new laboratories during the next decade if at all possible.

As I indicated to you last week, if and when the school of biology is approved at all administrative levels -- College, University Senate, and Board of Trustees -- I should expect to recommend Professor Halvorson for appointment as its first director. Presumably the director of the school would not also serve as the head of a department, and hence eventually the headship of the Department of Bacteriology would become vacant. It has turned out, however, that we are not really in a position now to make any definite plans in anticipation of this vacancy. I can assure you, however, that your views and wishes as regards this and all other affairs of biology would always receive the most careful consideration.

Let me say finally that we need you here for your scientific eminence, for your educational counsel, and for your influence on graduate students, as we move towards what we all expect to be a new era in biology at Illinois. All of us hope that you and Mrs. Luria will finally decide in our favor, and that we can look forward to welcoming you home next September.

Sincerely yours,

Lyle H. Lanier
Dean

c.c. Provost G.N. Ray
Dean F.T. Wall
Professor H.O. Halvorson
