Dear Arthur,

We were delighted to hear the wonderful news of the Nobel award. May I extend our congratulations.

As you may (or may not) know, you are my favorite bioclimatist, and everybody here agrees with me that it was very well deserved, especially for all the recent DNA work. Will you be coming to Cambridge on your trip to Sweden? We'd love to see you, and hear the latest developments.

When I got back here I found this letter. John was most
had gone, if anything, faster than anticipated. Max, who has a Fourier to 6 Å resolution, can see that haemoglobin is, structurally, very like 4 myoglobin units; and John, who has a Fourier to 2 Å resolution, can see several checkboard pieces of right-handed α-helix. It seems almost certain that within two years we will have found the complete configuration of myoglobin.

While we read her best wishes, it will mean, to you and your wife, your ever, Francis. 4/9
